ABSTRACT

The Ukraine invasion is arguably the single most important event in this century so far. So many geopolitical outcomes and changes have been caused and will be caused by this invasion. As part of this, Russia has engaged in informational warfare, much of which is propaganda through articles. This study attempts to quantify the outflow of information, chronicle the narrative changes and track the type of language as the invasion has progressed. This will be done by creating a corpus of Russian government-funded sources spanning from the beginning of the invasion in February 2022 to March 2023. This study will track and quantify the language of the corpus by performing topic mapping, sentiment analysis, and visualization through topic clusters. The goal of this study is not to be the arbiter of truth but to be the dutiful chronicler of Russian propaganda and its implications.

1. INTRODUCTION

1.1 Purpose and Scope

The main objective of this study is to chronicle the Russian propaganda narrative of the conflict and track the language via LDA, topic mapping, and sentiment analysis. The dataset will be the online article content of the TASS news organization. This will comprise a total of 7830 articles collected by a purpose-built web scraper from February 2022 through March 2023. Narrative implications will be interpreted through the topic modeling of the government-backed new sources, language choices within those articles, and timing to relevant events within the invasion.

1.2 Importance of This Study

This is an important evolution in this type of study. Many analyses of propaganda rely on qualitative interpretations of human-scale size datasets. Although, any study in this field requires qualitative understanding and context, the ability to apply large-scale datasets through unsupervised AI analysis allows for an understanding of the larger picture of a propaganda narrative. In particular, there have not been many studies chronicling the Russian propaganda narrative surrounding the Ukraine invasion. This study will be able to display the change in the narrative as the invasion went along, and the insights regarding changes in informational warfare strategies.

2. LITERATURE REVIEW

2.1 Overview

Two main events have occurred within this century to have truly global paradigm-shifting consequences: the first was 9/11 and the consequences afterward and now the Ukraine invasion. Understanding the importance of this invasion, this study aims to cover the basics of propaganda, informational warfare, sentiment analysis, quantifying language clusters, and topic mapping of the Russian Federation's narrative. From this, we hope to see patterns and changes to that narrative as the invasion progressed. This study will be sourced from the Russian TASS News organization and will not include information from other types of media, as this would be too large for the scope of this study. The goal of this study is not to be the arbiter of truth but to be the dutiful chronicler of Russian propaganda and its implications.

2.2 Ukraine-Russia Conflict Background

This will be a brief summary of the conflict and not an extensive background to the conflict, as that would require dedicated reading and understanding. In neutral terms, this conflict began in 2014 with the war with Ukraine over the Crimea and Donbas territories. Due to the high number of Russian-speaking population, referendums were held and voted to join the Russian Federation. Ukraine and much of the world denounced these referendums however these territories have been de-facto Russian states since 2014. In February 2022, the Russian Federation invaded the whole of Ukraine with the stated intention of denazification of the Ukrainian regime (Russia Today, 2022). Since then, there have been multiple battlefield shifts involving the attack then retreat from Kyiv, the capture of Kherson, the Ukrainian counteroffensives in the Kharkiv and Kherson oblasts, and the battle of Bakhmut. The battlefield movements are not the primary subject of this study but are necessary to know as that will influence the topic clusters of this study.

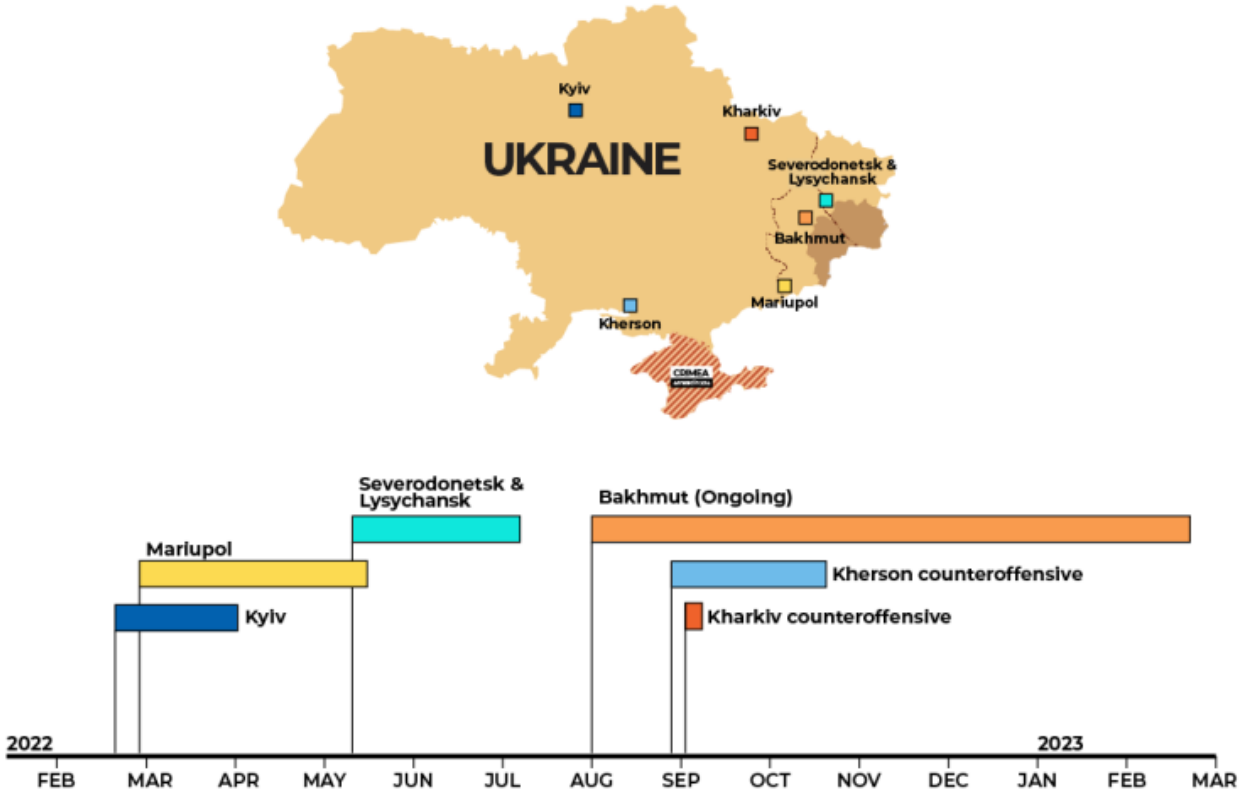

Figure 2.2.1. This figure shows the largest battles that have occurred and the timeline of those battles/offensives. Currently, the largest ongoing battle is of Bakhmut (also known as Artemovsk). (Modified from https://www.aljazeera.com/news/longform/2023/2/21/mapping-the-major-battles-of-the-ukraine-war)

2.3 Propaganda Concepts and Current Media Environment

Propaganda is a charged and loaded term, one that is not used frivolously in this study. All information released directly from belligerents in times of warfare is propaganda regardless of the veracity of the information. There are quite a few definitions of propaganda ranging from the 'direct attack against man' (Ellul, 1965), the 'systemic mistreatment of truth and information and their procedural safeguards' (Cunningham, 2002), to 'a mere tool' (Lasswell, 1937). The commonality between these definitions is that propaganda - is a way to use information to direct public sympathies and attitudes. This is the definition we will use in this study, as that statement does not apply any judgment of the veracity of the statement and only explores the implications of the mass adoption of that knowledge.

Within the context of war, propaganda may be used to: provide the appearance of public consent (otherwise referred to as manufacturing consent), gather support for the entry into a war, justify or legitimize certain actions during the war, direct public sympathies toward some groups or away from others, to dishearten enemy forces, encourage uprising against the enemy government or military, or to develop sympathy among the enemy nation (or observing nations) for the invading nation, before the invasion (Hiebert, 2003).

This study relates to domestic news media within the Russian Federation, and to understand that model we would apply a variation of the Propaganda Model developed by Herman and Chomsky (1988). The Propaganda Model examines news media behavior concerning state interests within the United States, doubting the media as the 'fourth estate' tasked with keeping the government powers in check. Herman and Chomsky argue that the media often reflects the interests of the economic and political elite (Scriver, 2015). The Propaganda Model sets out five 'filters' which they argue act to cleanse the news of dissenting voices. The filters are

1. The size, concentrated ownership, owner wealth, and profit orientation of the dominant mass media firms;
2. Advertising is the primary income source of the mass media;
3. The reliance of the media on information provided by government, business, and 'experts' funded and approved by these primary sources and agents of power;
4. 'flak' (i.e. negative responses) as a means of disciplining the media; and
5. 'anti-communism' as a national religion and control mechanism (Herman and Chomsky, 1988).

This model was developed to describe the United States media during the Cold War and as such has some distinct differences from the reality of the modern-day Russian Federation. We will then modify the filters to fit this study's corpus and data source. For the first filter, most major news organizations TASS, and Russia Today (RT) are government-funded, TASS is fully government-funded, and RT is partially government funded. In this case, the profit motive is not as strong in these organizations. Since TASS is a government mouthpiece that only releases government-approved narratives and information and is the largest of these organizations, is why this organization was chosen as the source for the Russian propaganda narrative. The second filter is similar to the first filter in that since TASS is government-funded, advertising is not the primary income source of the organization. The third filter is still relevant in this study in that all 'experts' on this topic are government-vetted individuals and all cited primary sources are approved of by agents of power. The fourth filter is somewhat relevant as although this organization is designed to provide the government narrative, due to either miscommunication or overreach articles have been removed from TASS after publication. The fifth filter is one that we will have to change the most as modern-day Russia looks back upon the USSR with mixed sentiments. There is nostalgia for the imagery and power of the USSR in its time, while simultaneously understanding that the political elite does not wish to have that government structure and prefers to have the current oligopolistic crony capitalist system which is the current state of the Russian Federation. As such Putin's regime invokes the imagery of the USSR's past when it displays Russia as a strong player on the international stage but shies away from imagery that would diminish his power or privileges. To shape this filter to match the current environment, the better filter would be 'anti-western'. This involves the use of religion (Russian Orthodoxy) as well as, other cultural mores to attempt to highlight corruption, and perceived moral 'degeneracy' within the West and to position Russia as a bulwark to those actions and mores.

2.4 **Information Warfare Concepts**

Information warfare is likely a concept many can grasp but most overlook its importance in a conflict such as Ukraine. In a nutshell, information warfare has been defined as all forms of struggle over control and dominance of information (Libicki, 1995). Information warfare sits on two pillars. One is cultural hegemony, the soft power to influence and affect perception due to the authority/esteem/respect in which the provider of the information is held by the recipient (Beal, 2022). The other is the organizational

framework, a network of information collection, creation, and dissemination to which the goal is to manage perception (Beal, 2022). Ultimately, these two pillars are then set to control which information is passed to the general public and used in a way to benefit the disseminator. The process is broken into two main functions: creation and dissemination. This is done through sets of actors: creators, hybrids, and disseminators (Beal, 2022). Information is created by many actors – international, domestic, government, private organizations, or individuals – in numerous ways.

Creators are the first stage of the process and for them, they need already existing data. A large portion of these originates from neutral data such as demographics, and economic information which is collected in an impartial and practical setting. For information warfare, however, this data is needed to be weaponized, and as such molding the perception of this neutral information. This information can be highlighted to show the weaknesses of the opponent or to counter opposition narratives of conflict. The other aspect for creators is the creation of disinformation, which is meant to confuse, misdirect, mislead, or otherwise deceive the opposition to use for your advantage.

Hybrids are actors who create and disseminate propaganda and are not limited to either component of the process (Beal, 2022). Some Journalists in this regard act more as stenographers who distribute information that they are given. Many news organizations would fall into this category as some of the more prominent ones will use data originally sourced from information warfare creators and repackage/repurpose that information into their unique flavor, which is disseminated.

Disseminators are ultimately the actors who reach the intended audience. That could be news organizations, general media, alternative media, and in modern times memes/internet websites. This is likely one of the most crucial stages of the process as this involves molding the information to achieve the desired effect on the target population and nowadays that usually involves a multi-tiered approach to reach different sections of the population. Many of the population consume different types of media, and an example would be the older generation who refer to television news sources as one of their primary sources of information (Brown et al., 2012). Younger generations have shifted their media consumption online, and even younger generations are primarily through short-form videos (TikTok) and memes as large portions of their media diet. This means for information warfare to be effective it must cross all these barriers and adapt to each media environment.

In the context of the Ukraine invasion, what does this look like? Typically, the Russian public consumes media that has its information sourced from the Russian government and the occasional Russian Milblogger. This information is disseminated largely through television programs, with notable podcasts and some bloggers being secondary influencers. The Russian side has focused on the original invasion narrative of the denazification of Ukraine, information supporting troop morale, notable battlefield movements, and information damaging Ukrainian morale.

Figure 2.4.1. This figure depicts the general distribution of propaganda through the multiple levels of information dissemination. In our study we take our data from TASS instead of Russia Today and as such take our data from the Agencies and proxies' section. Another difference regarding this is that the consumer is not simply western citizens but domestic Russian population who are consuming this media as well. (Modified from https://global-strategy.org/information-warfare-feed-information-with-disinformation/)

Russia is likely using bots/troll farms to post memes/information on non-political websites such as Reddit as an example. Although, as a civilian study, this information is not available, this tactic does fit information warfare strategies that are being employed in this conflict. However, this study will not include this portion as the authenticity and intention behind user posts cannot be determined.

This study will not focus on any visual media, meme sites, or opinion pieces. This study will consist of news articles taken from government-aligned Russian news sources. This will be the data from which this study will attempt to quantify narrative changes.

2.5 **Primary Technical Approaches**

Information Retrieval is the science of searching for information in a document, searching for documents themselves, and also searching for the metadata that describes data, and for databases of text, images, or sounds. The datatype used in this study will be text and understanding information from a large corpus. In this endeavor, we will use Natural Language Processing. Natural language processing is a powerful way to search through text to find or extract useful information on a large scale. For this study, we will be applying natural language processing to a corpus of 7700 articles in which we can quantify important aspects of each article's tone, and message, and glean patterns about the overall dissemination of information.

2.5.1 Latent Dirichlet Allocation (LDA)

Latent Dirichlet Allocation (LDA) is described as a generative probabilistic model for collections of discrete data, in our case text corpora (Blei et al., 2003). LDA is a three-level hierarchical Bayesian model, in which each item of the corpora is modeled as an infinite set over a defined amount of topic probabilities (Blei et al., 2003).

LDA is one of the latest regarding text classification and topic mapping. The foundational history of LDA is built upon the evolution from K-means clustering by the introduction of latent variables.

This is the foundation for many of the information retrieval methods of text corpora. One major step in information retrieval was in the form of Latent Semantic Indexing (LSI). LSI uses a singular value decomposition of the X matrix which then identifies a linear subspace in the space of features, that represents the most variance of the corpora (Blei et al., 2003). This was useful however, one would like to provide a generative model of data and glean information from that dataset, and in this endeavor using a Bayesian or maximum likelihood methodology would be more effective. Thus, a new methodology of a probabilistic LSI (pLSI) was developed by Hoffmann (1999). The pLSI approach models each word in a document as a sample from a mixture model, in which the mixture components are multinomial random variables that are the representations of "topics". In that case, each word is generated from a single topic, and different words in a document may be generated from other different topics (Blei et al., 2003). This was a large leap forward however had a few significant problems. A few are the number of parameters increasing linearly with the size of the corpus, which leads to overfitting and it is not capable of effectively assigning probability to documents outside of the training dataset. These are the problems LDA sought to solve and the foundation which LDA is built upon.

Other latent variable text models include Unigram, Mixture of Unigrams, and pLSI models. The increasing levels of complexity form the mathematical background of LDA.

Unigram models generate words for every document independently from a single multinomial distribution (Blei et al., 2003). This is illustrated in Figure 2.5.1.1.

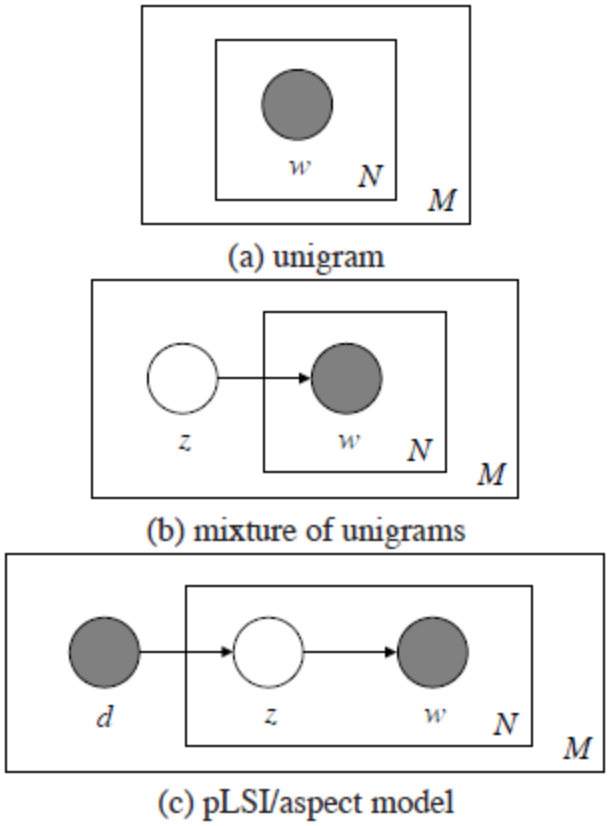

Figure 2.5.1.1. Graphical models of latent variable models for text and their various levels of complexity. With variables consisting of a probability of a term (w), topic (z), words (N), and corpus (M) (Blei et al., 2003).

Mixture of unigrams model introduces a discrete random topic variable (z). In this model each document is generated by first choosing a topic z, then generating N words independently from a multinomial distribution (Blei et al., 2003). Probabilistic latent semantic indexing (pLSI) introduces document (d). This model posits that document (d) and word (w_n) are conditionally independent given an unobserved topic (z).

LDA builds upon these by introducing another parameter to the mixture of unigrams, which allows words to be part of multiple topics instead of singular topics and a Dirichlet allocation to the simplex creating a hidden simplex of topics. This is demonstrated in Figure 2.5.1.2 and Figure 2.5.1.3 respectively.

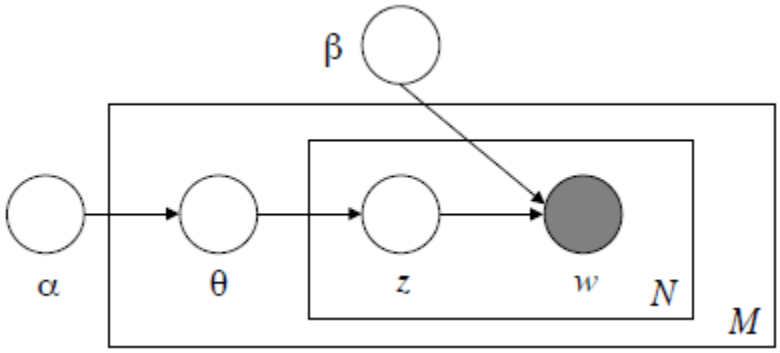

Figure 2.5.1.2. Graphical representation of LDA. Each box represents a replicate with the outer box (M) representing documents, and the inner box (N) representing the repeated choice of topics and words within a document. α and β, are corpus level parameters applied to every iteration. α is defined as a k-vector with components $\alpha_i > 0$, and β is defined as the word probabilities matrix parameterized by a k x V matrix (Blei et al., 2003).

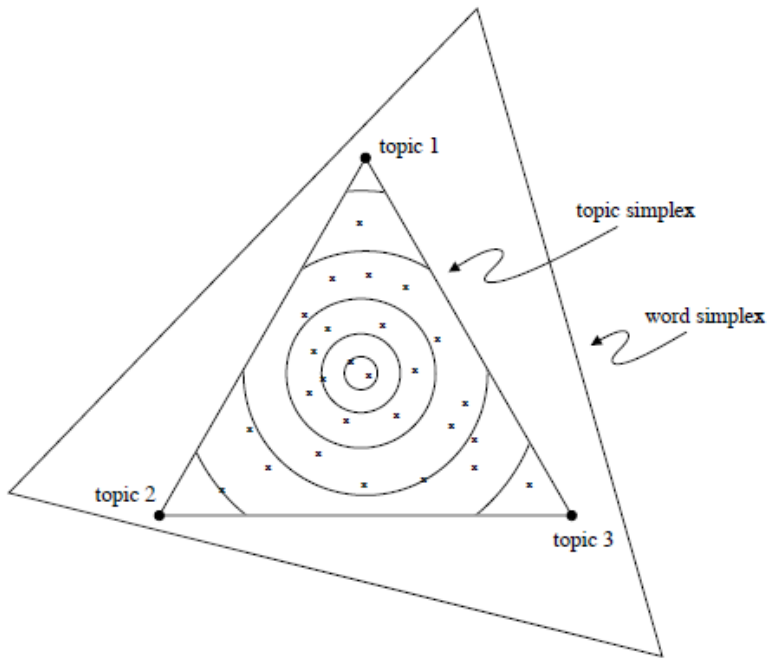

Figure 2.5.1.3. This is a geometrical representation of LDA in terms of the topic simplex overlayed upon the word simplex. This is a geometrical representation of a word simplex of three (3) words. The corners of the word simplex correspond to the distribution where each word has a probability of one (1). The three points noted on the topic simplex correspond to three different distributions over the words. The mixture of unigrams model would place each document at one of the corners of the topic simplex. The pLSI model would impose an empirical distribution across the topic simplex, while LDA applies a smooth distribution on the topic simplex which is shown in the figure as the contour lines (Blei et al., 2003).

LDA was improved by using tf-idf and then later Word2Vec. Tf-idf (term frequency–inverse document frequency) produces a probabilistic matrix of a word in a document(s) for a corpus. This was a dominant method for a long time, only being supplanted by Word2Vec in 2013. Since very large corpuses contained very large initial term vectors, this decreased the effectiveness of Tf-idf. Word2Vec treated each term as a vector instead of the representation of its original self, this reduced the dimensionality of the corpus and increased its effectiveness (Mikolov et al., 2018).

2.5.2 Topic Mapping/ Topic Modelling

Topic mapping/modeling is a standard technology for describing knowledge structures and using them to improve the interpretation of information (Pepper, 2009). Topic modeling is one of the most powerful methods in text mining and language visualization that aims to display patterns and find relationships from a collection of text documents (Fathan et al., 2018). As described in section 2.5.1 LDA was the modeling technique used in this study as it has been a proven unsupervised learning methodology for finding multiple topics within text data. In this study, Scikit – Learn was used to extract topics from models, by taking an input argument of the text corpus, the number of topics to be extracted, and a dictionary of terms which is the preprocessed document.

2.5.3 Sentiment Analysis

Sentiment analysis seeks to identify the viewpoint(s) underlying text data; a classic application is one of reviews classifying responses as “thumbs up” or “thumbs down” to denote sentiment about the film. Sentiment analysis is a machine learning method to determine sentiment polarity through the application

of text-categorization techniques which interpret subjective portions of the text document (Pang, Lee, 2004).

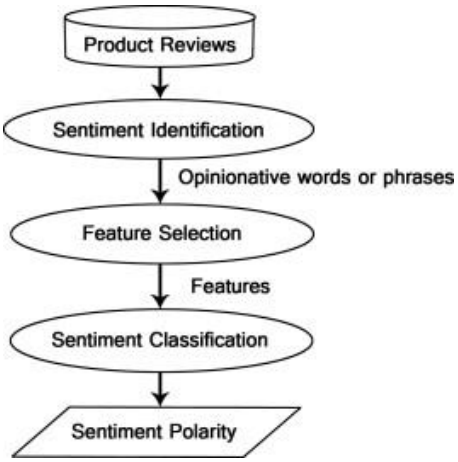

Figure 2.5.3.1. Displays an idealized illustration of the process of sentiment analysis for a product review setting. Shows the steps from data collection (Product Reviews), data processing (Sentiment Identification through a dictionary of opinionative words or phrases), feature selection, and analysis through sentiment classification and sentiment polarity. (Medhat et al., 2014).

There are three main classification levels in sentiment analysis: document level, sentence level, and aspect level.

The document level as the name suggests aims to classify an opinion of a document that expresses a positive or negative sentiment about the topic (Medhat et al., 2014). This level of analysis is useful as the final product of sentiment analysis if one wishes for a broad-scale look at reactions to a topic.

The sentence level is similar however narrower in scope as that identifies individual sentences' sentiment. It is important to note that there is no fundamental difference between document and sentence-level classifications due to sentences being treated as short documents (Wilson et al., 2005).

The aspect level is the analysis of sentence aspects and document aspects which form the backbone of all sentiment analysis. Both the sentence level and document level utilize aspects in their overall analysis, and this is the basic unit of sentiment analysis.

The architecture of sentiment analysis is applied to document-level classification, and in this endeavor Support Vector Machines (SVMs) can be applied (Pang, Lee, and Vaithyanathan, 2002). From this application default polarity classifiers were defined. Sentiment analysis begins with a subjectivity detector that determines whether each sentence is subjective or not. Discarding the objective sentences then creates an extract that is a better representation of a text's subjective content to a default polarity classifier (Pang, Lee, 2004). This text data is then processed in the architecture shown in Figure 2.4.3.1 as the input document.

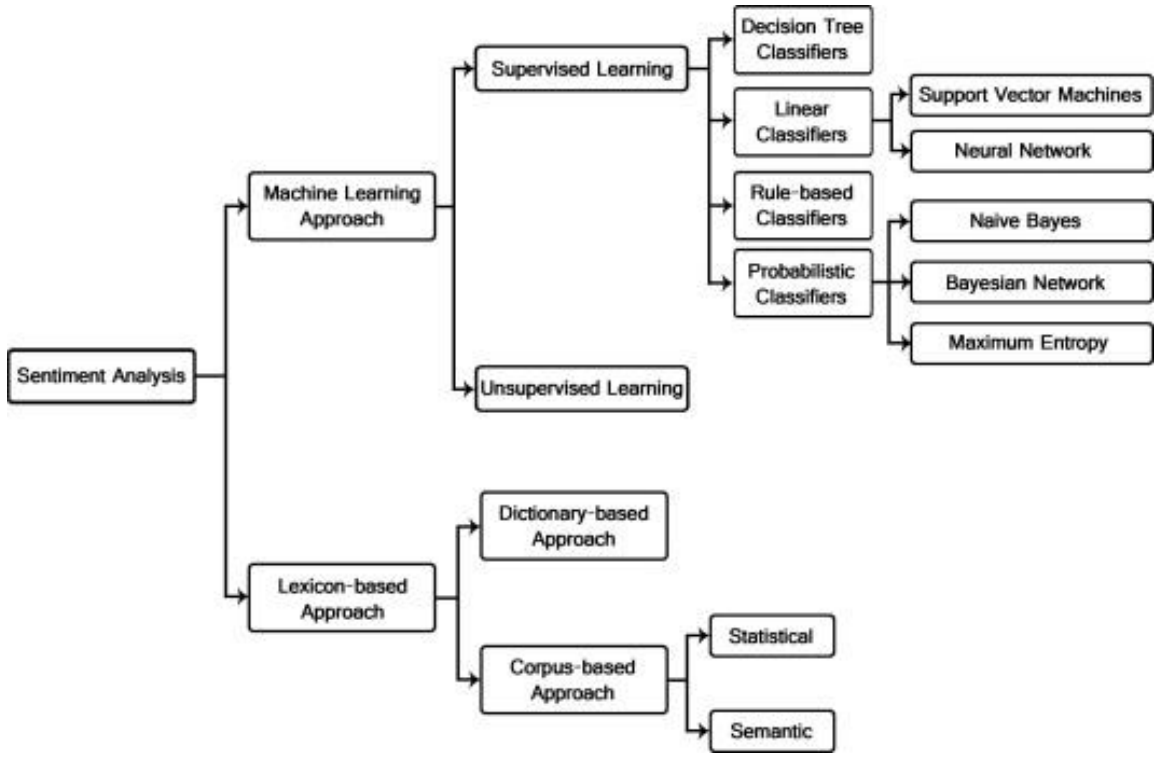

Figure 2.5.3.2 This diagram shows multiple ways of sentiment classification, for this study we will be applying the Lexicon-based Approach with the Corpus-based Approach while using a holistic analysis of both Statistical and Semantic analysis of the data (Medhat et al., 2014).

The most recent method of sentiment analysis is BERT. BERT is an open-source machine learning framework for natural language processing, and can be used for sentiment analysis. In terms of sentiment analysis BERT uses aspect pairs and involving latent variables able to produce aspect sentiment classification as depicted in Figure 2.5.3.2 below.

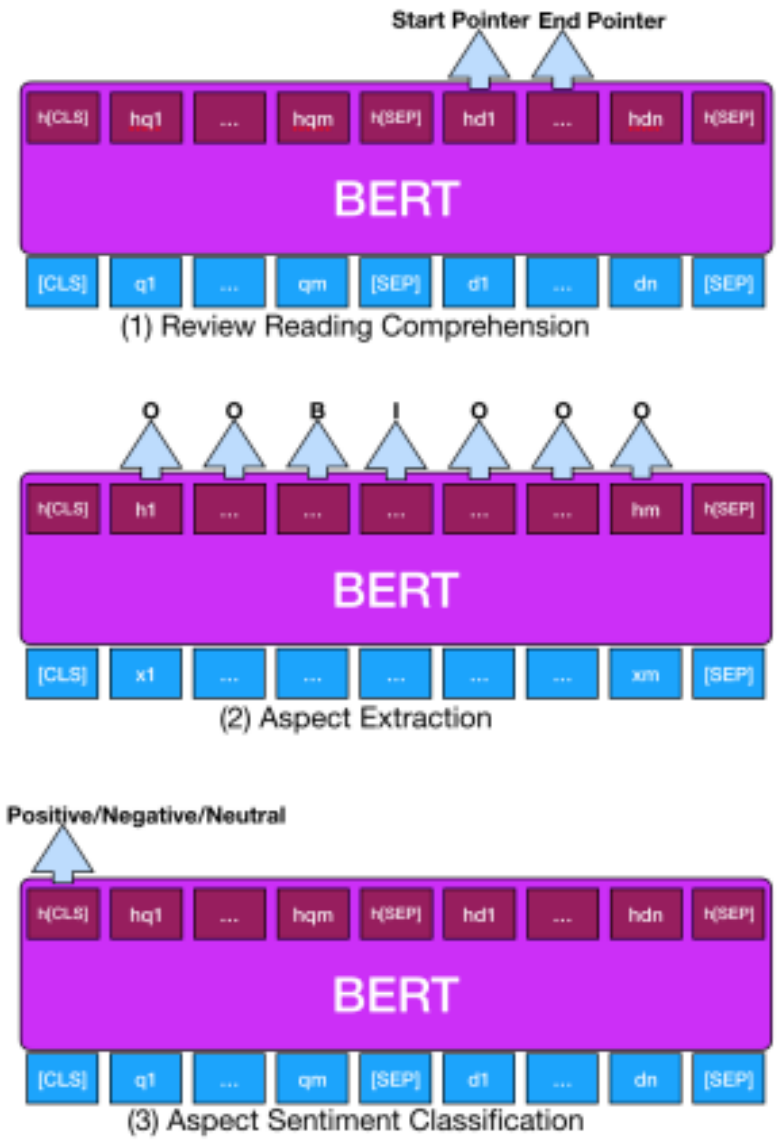

Figure 2.5.3.3. An overview of BERT framework used in Aspect Sentiment Classification of a corpora. (Xu et al., 2019).

3. DATA AND PREPROCESSING

3.1 Data Source

Data sources for this study are collected from the TASS News Agency. Specifically, the articles relating to the Ukraine Invasion from this catalog of articles (tass.com/military-operation-in-ukraine). A total of 7700 articles were collected and comprise the dataset for this study. The TASS News Agency is a directly government-funded news organization and has a strong association with the Putin regime within the country. This allows for a clear view of the domestic propaganda narrative which is to be chronicled. Table 3.1 shows the dataset of this study.

Table 3.1

Month, Year	Number of Articles
February 2022	187
March 2022	788
April 2022	719
May 2022	566
June 2022	495
July 2022	489
August 2022	565
September 2022	529
October 2022	697
November 2022	601
December 2022	585
January 2023	667
February 2023	498
March 2023	445

TASS news organization provide articles in Russian, English, French, Spanish and Chinese (Mandarin). This study used the English version of articles in data collection. It is understood that although these articles are in English the Russian articles contain the same content. This shows that the articles can/are used for domestic consumption as well as Western audiences.

Most articles are relatively short and meant to be quickly consumed. The average word count for an article about 153 words. The short word count per article lends itself to surface level information being expressed. In terms of this study, that means that many topics will be expressed every month due to the high number of articles produced, but no topic will have in depth analysis beyond surface level. This study will then focus on topic shifts and changes, while not attempting to glean in depth motivations for any given topic.

3.2 Data Collection

Data was collected from a purpose-built web scraper to gather information from tass.com/military-operation-in-Ukraine. The web scraper was built using the Selenium library and Chrome extension, in which the website (tass.com/military-operation-in-ukraine) was loaded and selective information was gathered through HTML objects. The information that was gathered was article title, date, and content from the entire catalog (a total of 7700 articles) beginning with February 22, 2022, through the end of March 2023.

It is important to note for the content html object of each article was gathered using an XPATH of the html object and in certain articles the body text was located in a different html object. These articles were dropped from the dataset as the web scraper gathered the picture source instead of the body text.

3.3 **Data Preprocessing**

Data preprocessing took the form of removing stopwords from the article content, splitting content into subsequent strings, and applying lowercase to all strings. This was done to normalize our dataset and remove any words that would be statistically frequent but non-productive in terms of insight. Splitting the content into subsequent strings allows for topic mapping to pick out individual words as topics and is necessary for Topic Mapping. Applying lowercase was used to help normalize the dataset and remove topic duplications due to the capitalization of words being treated as separate topics. Additional words were transformed to reduce noise in the topic mapping, such as transforming nationalities like Russian to Russia, and Ukrainian to Ukraine. This change reduces the amount of duplication within the topics highlighted in topic mapping. For example, military equipment is described as being Russian or Ukrainian, and the topics Russian and Ukrainian provide no further insights than simply referencing the country itself. Finally, stemming then lemmatizing the resulting content.

The content was then split into different data resolutions: Overall resolution, Monthly resolution, and Categorical resolution. The Overall resolution refers to the total corpus of 7700 articles. The Monthly resolution refers to dividing the total corpus into months since the beginning of the war. The Categorical resolution divides each month's corpus into thirteen (13) categories based on the URL of the article itself (i.e. https://tass.com/**politics**/1593659). The categories are shown in Table 4.1.

4. METHODOLOGY

4.1 Topic Mapping

Topic Mapping will be performed using the SkLearn library with PyLDAvis as the visualization library. Topic Mapping itself will be analyzed using LDA (Latent Dirichlet Allocation) along with Tf-Idf (Term Frequency – Inverse Document Frequency) of fifteen (15) topic clusters of associated terms.

For LDA a specified number of topics must be chosen. This study used fifteen (15) topic clusters due to the large corpus and the fact that this number of topics allowed for each topic cluster to contain >1% of total tokens for a given corpus, as well as have not topic overlap within a Saliency x Relevance 2D space. Having topic overlap would be over-dividing the corpus as new topics would not gain new insights. The inflection point for topic number of this corpus was then fifteen (15) topics.

Tf is defined as $tf(t,d) = \frac{f_{t,d}}{\sum_{t' \in d} f_{t',d}}$ with tf (t,d) is the relative frequency of term t within document d.

IDF is defined as $idf(t,D) = \log \frac{N}{|\{d \in D : t \in d\}|}$ with

- N: total number of documents in corpus N = |D|
- $|\{d \in D : t \in d\}|$: number of documents where the terms t appears (tf (t,d) != 0).

An LDA model was built and trained upon that encoded data. Articles were divided into different corpus sizes. Monthly Categorical resolution, Monthly Overall resolution, and Total Corpus resolution.

The **Overall resolution** describes the total corpus numbering 7700 articles. This was chosen to get the broadest scope of the overall narrative and determine the strongest narrative elements throughout the invasion.

The **Monthly resolution** is the overall resolution corpus broken down by month of article publication from February 2022 through March 2023. This meso-scale resolution allows for insights to be made about narrative changes, while still containing a large enough corpus to see consistent topics across the months.

The **Categorical resolution** is each monthly resolution corpus further broken down into categories listed in Table 4.1. This is the finest resolution in this study and is determined from the category of each articles URL (i.e. https://tass.com/**politics**/1593659).

Every TASS article that is related to the military operation in Ukraine is published with a URL containing one of the thirteen (13) categories listed in Table 4.1. Each category corpus was collated from the articles' which contained the category within the published URL. This is then broken down into a monthly resolution as well as a categorical resolution, allowing for narrative changes within different aspects to be understood.

Table 4.1

Month	Category
Month, Year	Crimea-and-Sevastopol
	Defense
	Economy
	Emergencies
	Military-Operation-in-Ukraine
	Politics
	Russia
	Russias-Foreign-Policy
	Science
	Society
	Sport
	Ukraine
	World

Not every category listed in Table 4.1 was present in each month's corpus. Notably in the beginning of the Invasion, Politics was the primary category listed in regards to the invasion. Another example is the short-lived category of military-operation-in-ukraine which was not present at the beginning of the invasion and only occurred in a few months.

These topic clusters are visualized in an intertopic distance space defined by Saliency and Relevancy. Saliency and Relevance are defined as:

Saliency: $(term\ w) = frequency(w) * \left[sum_t p(t|w) * \log \mathrm{p}(\frac{t|w}{p(t)})\right]$

Relevance: $(term\ w \mid topic\ t) = \lambda * p(w|t) + (1-\lambda) * \frac{p(w|t)}{p(w)}$

4.2 **Topic Mapping Evaluation**

The topic mapping models were evaluated using topic perplexity and log_likelihood. Perplexity is defined as $(\prod_{i=1}^{n} q(s_i)^{\frac{-1}{N}}$ with s_i being strings in the corpus and N being the number of words in the corpus.

Log_Likelihood is defined as the natural log of the maximum likelihood estimation for each string in a topic.

Topic clusters were evaluated with these metrics to approximate the coherence of the topic cluster. Perplexity was used to quantify how 'surprised' the model would be when presented with new data. Log_Likelihood was used to quantify how likely is this word associated with the topic. These two metrics together allow for the judgment of how semantically close and coherent a topic cluster is.

4.3 **Sentiment Analysis**

The seven-thousand seven-hundred (7700) articles presented in this study are collected into individual bags of words. Using the nltk library and the VADER libraries to create sentiment intensity scores for each article and total corpus. These scores were then averaged depending on the data resolution being presented. The data were analyzed in terms of Individual article resolution, Monthly Categorical resolution, Monthly Overall resolution, and Total Corpus resolution.

Sentiment analysis preprocessing was performed and utilized the bag of words approach to creating unigram vectors. The Lexicon-based approach was performed utilizing the VADER library to perform a statistical Corpus-based Approach to sentiment analysis.

These scores will be categorized as Positive, Negative, and Neutral with an overall classification based on the compound score (if the compound score is >0.05 then overall has a positive classification, <0.05 a negative classification). Every article was evaluated containing both positive and negative sentiment tokens, with the compound score being the aggregation of the total number of sentiments, positive or negative, with associated sentiment weights.

5. RESULTS

The corpus has been analyzed using Topic Mapping and Sentiment Analysis, with the results shown below. Results have been categorized into different data resolutions: Overall Resolution, Monthly Resolution, and Categorical Resolution to depict macro-scale, and meso-scale narratives and narrative changes.

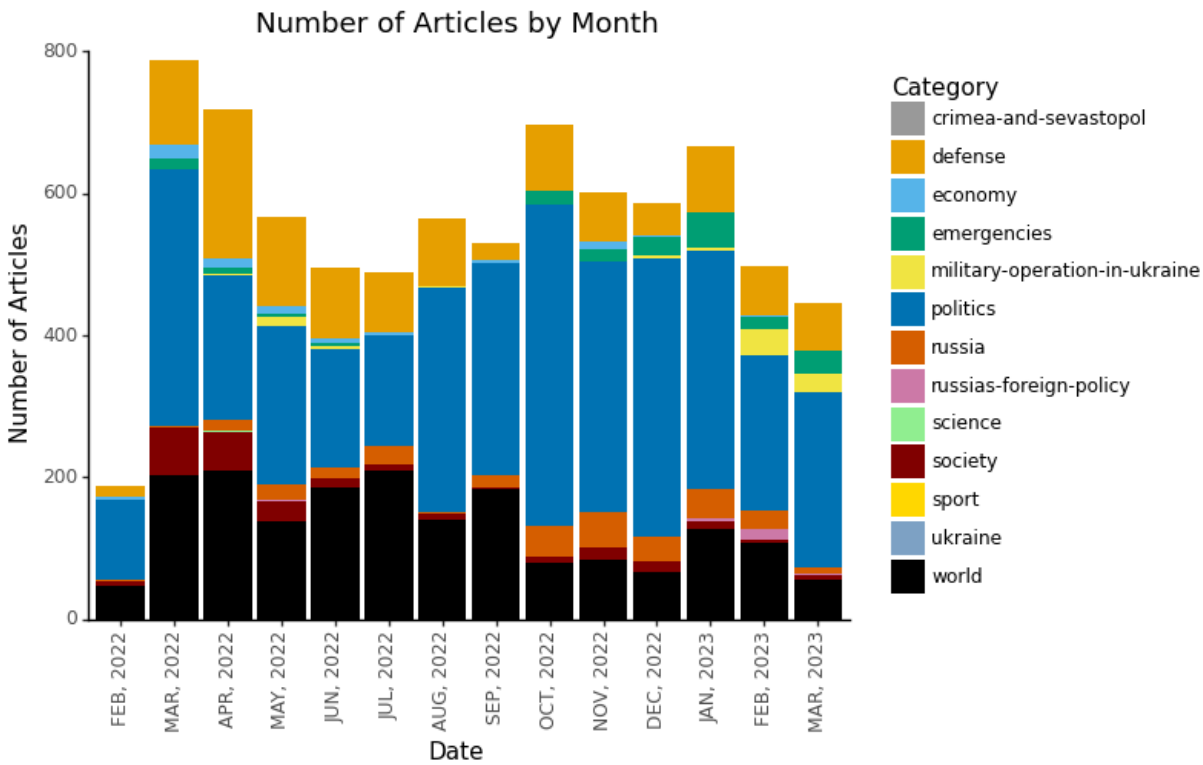

Figure 5.0.1 displays the number of articles written each month according to their respective categories. From this, we see that the most prevalent categories are: defense, politics, and world across all months. It is also notable that most months are averaging around 500 articles a month which is roughly 16 articles a day.

5.1 **Topic Mapping Results: Overall Resolution**

For the Overall Resolution, results are presented in Figures 5.1, 5.1a, and 5.1b placing each topic cluster and most used terms for the corpus. Topic cluster maps are presented in Saliency x Relevancy 2D space to show inter-topic distance.

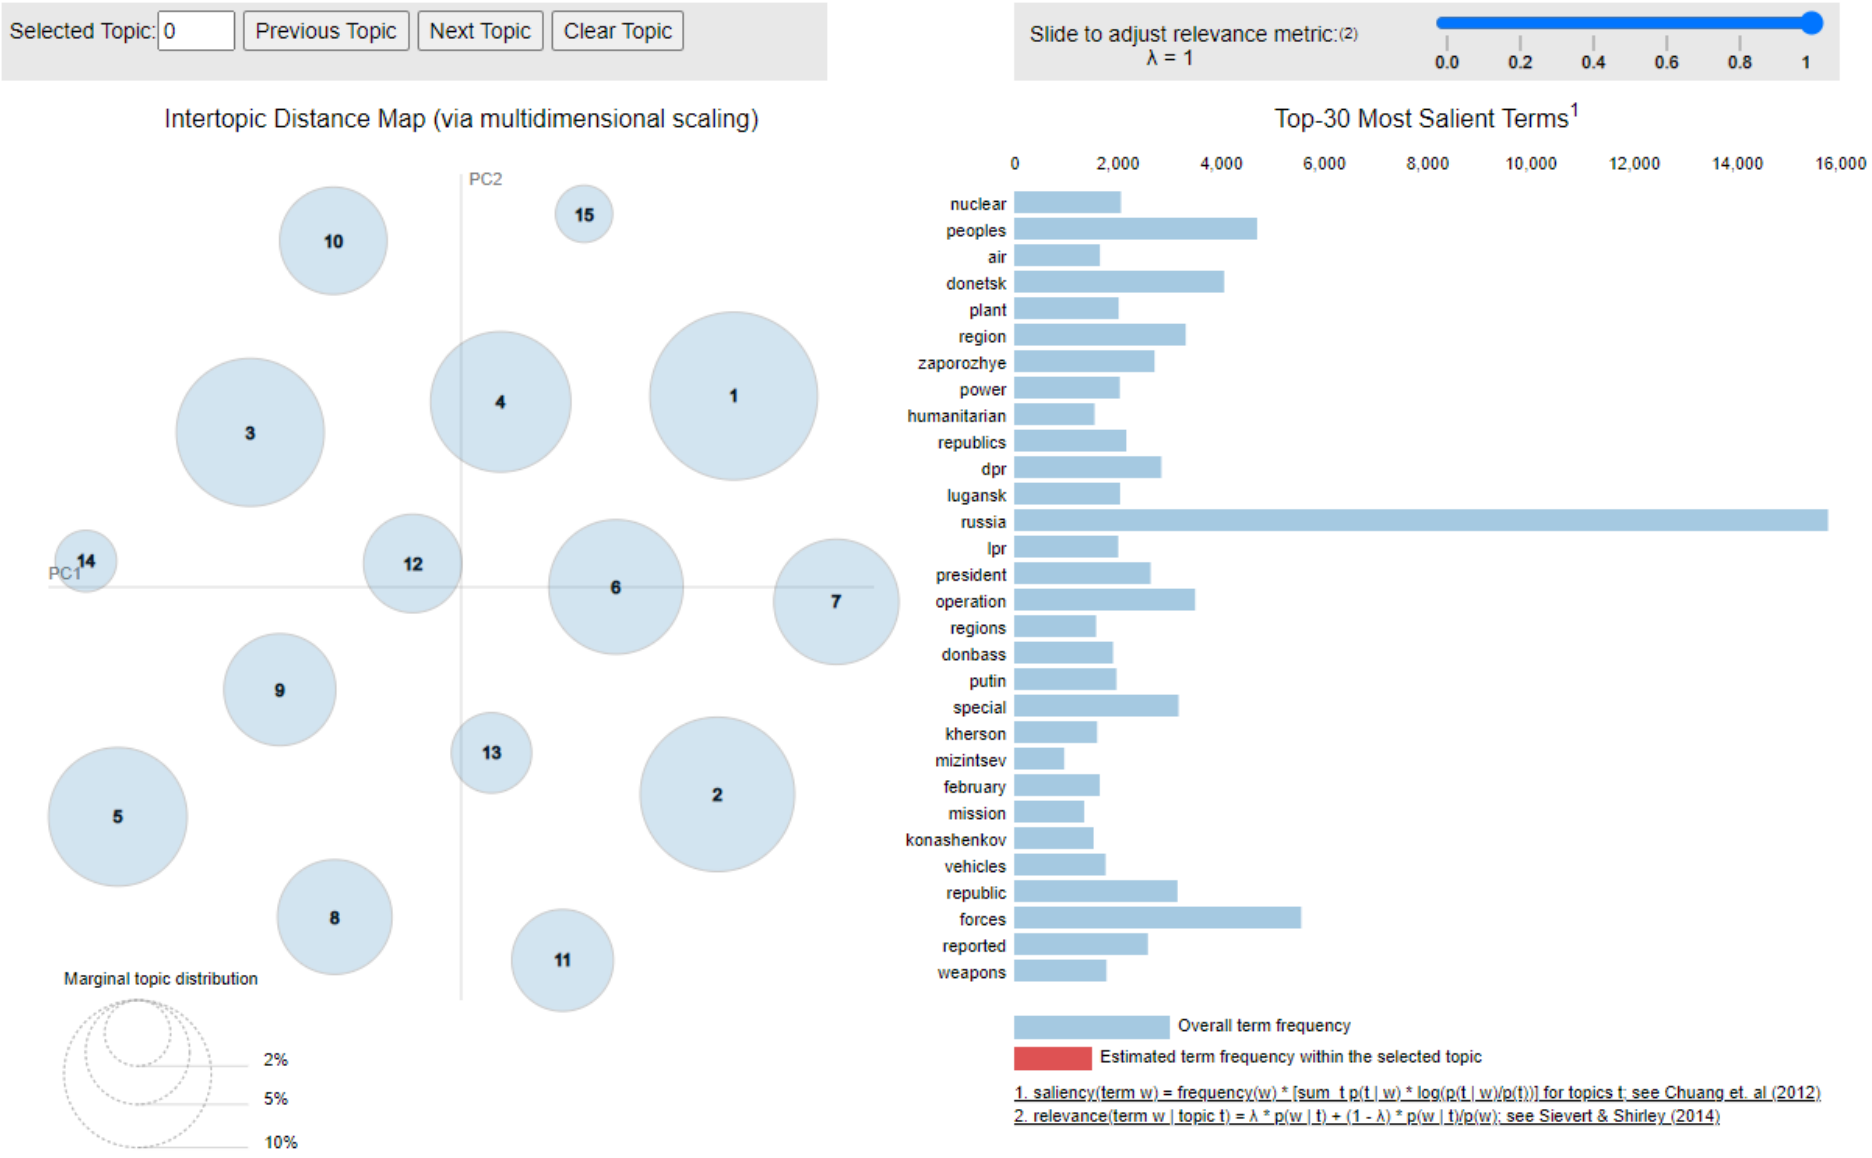

Figure. 5.1 This figure depicts the topic clusters for the corpus studied. This has been plotted on a saliency by relevance 2D space. Overall terms are depicted, and it is notable to mention the most frequently used terms: Russia, forces, People's, and Donetsk. The overall term frequency is dominated by Russia, Ukraine, and Putin.

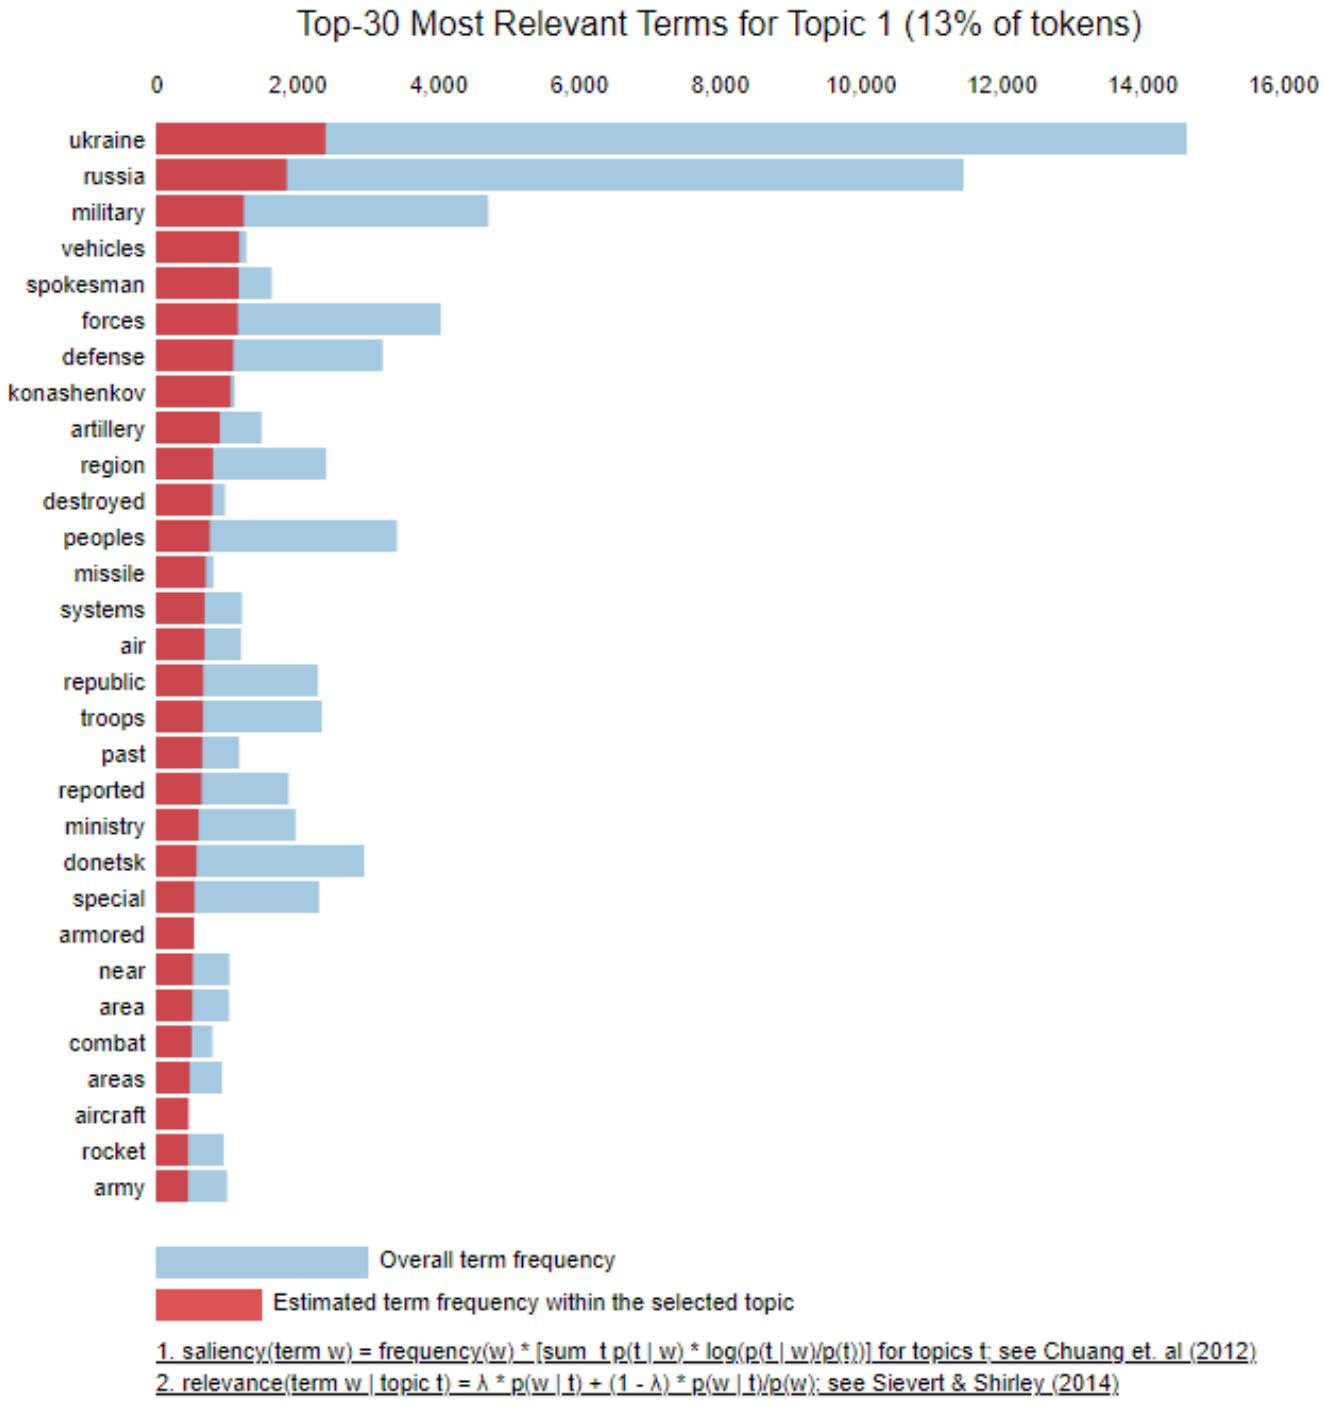

Figure 5.1a. Depicts topic cluster #1 from Figure 5.1, with important terms associated with the topic cluster. The topic cluster contains 13% of all tokens within the corpus and is the largest topic cluster at this resolution. The most relevant terms revolve around Russia and Ukraine with associated terms of military, vehicles, spokesman, forces, and defense. These are terms used in most of the documents in the corpus in some way or another and as such are clustered in this topic. The terms Ukraine and Russia are duplicated as LDA allows terms to be part of multiple topics.

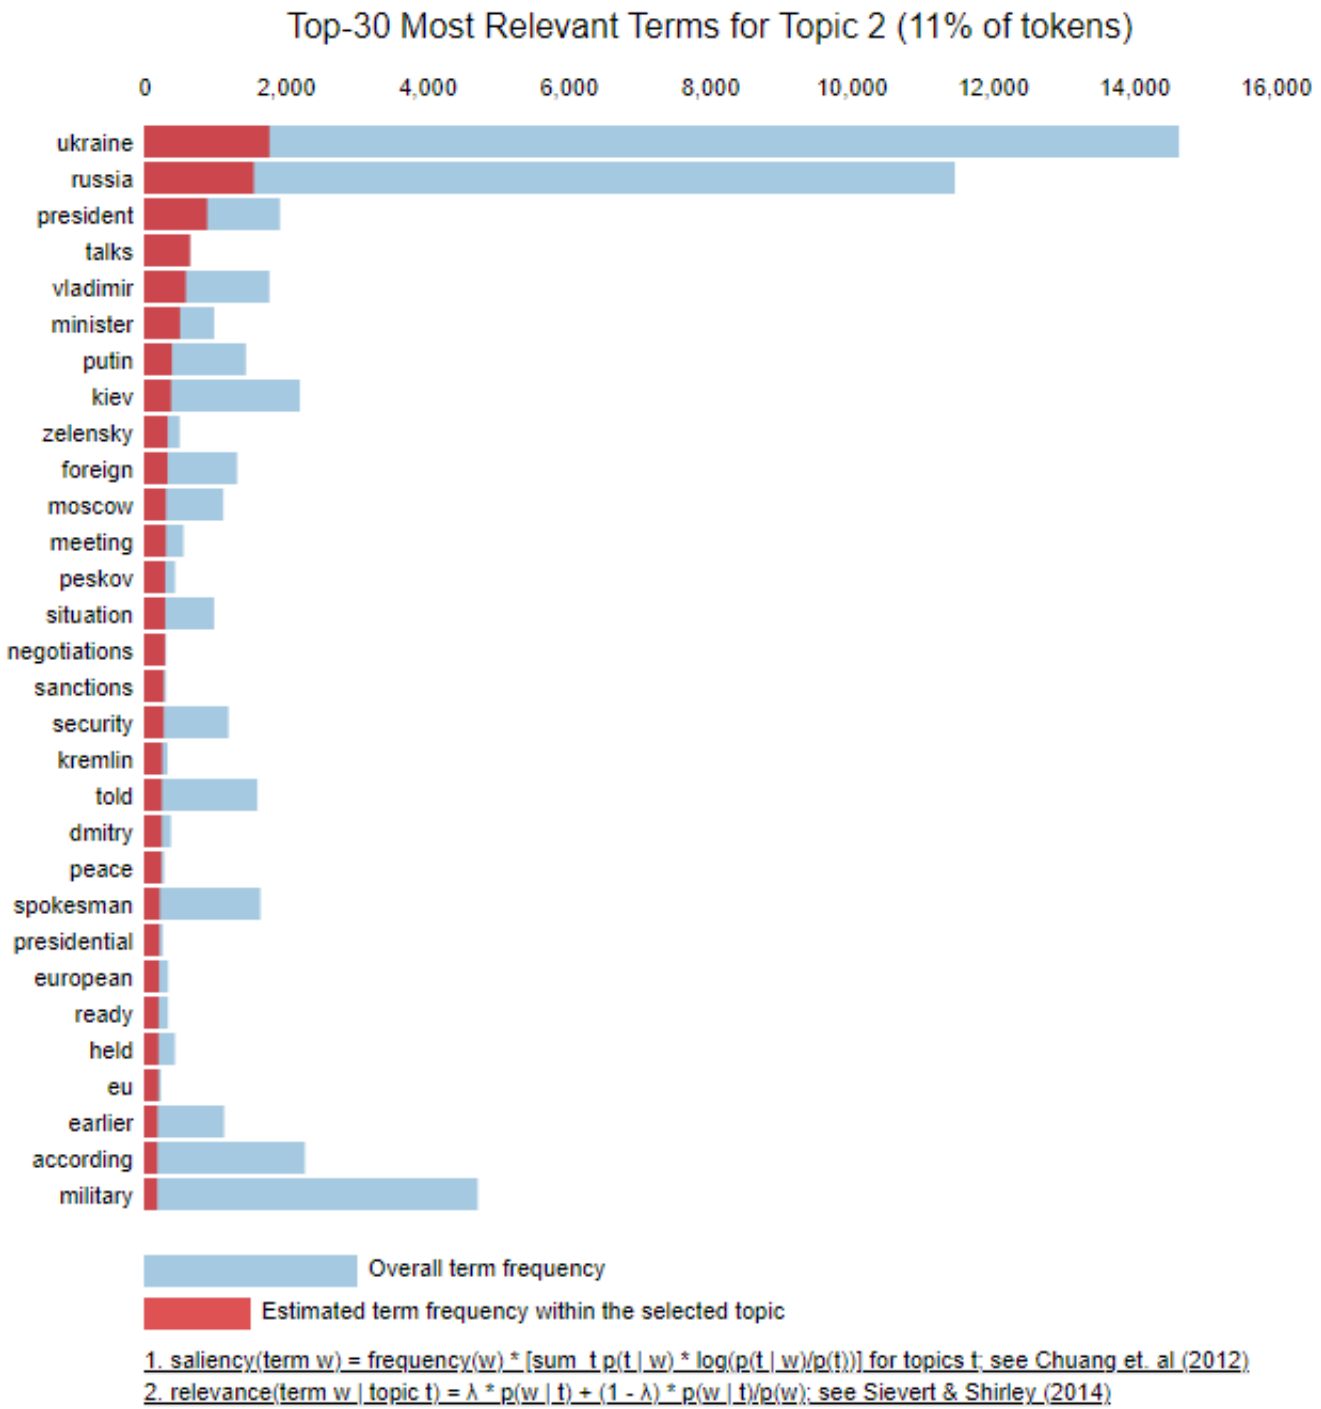

Figure 5.1b. Depicts topic cluster #2 from Figure 5.1, with important terms associated with the topic cluster. This topic cluster contains 9% of all tokens within the corpus. The topic's main terms are Ukraine, Russia, president, talks, Vladimir, and minister. The terms Ukraine and Russia are duplicated as LDA allows terms to be part of multiple topics.

5.1.1 **Topic Mapping Results: Monthly Resolution**

Topic mapping of the narrative is shown below in Table 5.1.1 This table consists of each month's topic clusters and the top ten (10) words (other than the topic cluster name) associated with each cluster.

	Month	Topic Number	Topic Keywords
0	FEB, 2022	0	[president, donbass, ministry, special, operation, kiev, thursday, military, ukraine, russia]
1	FEB, 2022	1	[depots, important, military, press, ukraine, reported, kremlin, ukraines, service, region]
2	FEB, 2022	2	[economic, russia, union, understand, russias, settlement, european, ukraine, conflict, sanctions]
7	MAR, 2022	0	[minister, military, special, foreign, operation, vladimir, putin, president, ukraine, russia]
8	MAR, 2022	1	[republic, republics, lugansk, dpr, humanitarian, people, donetsk, peoples, russia, ukraine]
9	MAR, 2022	2	[republics, forces, 24, special, ministry, defense, operation, military, ukraine, russia]
14	APR, 2022	0	[kiev, sea, russias, ships, azovstal, foreign, defense, mariupol, russia, ukraine]
15	APR, 2022	1	[ministry, donetsk, february, republics, operation, peoples, dpr, bucha, ukraine, russia]
16	APR, 2022	2	[center, defense, donetsk, russias, including, people, mizintsev, humanitarian, ukraine, russia]
21	MAY, 2022	0	[artillery, region, missile, vehicles, forces, air, defense, military, russia, ukraine]
22	MAY, 2022	1	[russias, kiev, vladimir, putin, president, special, operation, military, ukraine, russia]
23	MAY, 2022	2	[militants, ministry, forces, defense, mariupol, civilians, plant, azovstal, russia, ukraine]
28	JUN, 2022	0	[city, artillery, armed, dpr, mission, fired, forces, shelling, donetsk, ukraine]
29	JUN, 2022	1	[lisichansk, republics, dpr, republic, lugansk, forces, russia, lpr, ukraine, peoples]
30	JUN, 2022	2	[defense, artillery, forces, mizintsev, rocket, kiev, systems, weapons, russia, ukraine]
35	JUL, 2022	0	[konashenkov, forces, artillery, systems, spokesman, vehicles, defense, military, russia, ukraine]
36	JUL, 2022	1	[minister, lisichansk, lugansk, republic, dpr, forces, peoples, lpr, ukraine, russia]
37	JUL, 2022	2	[february, mission, shelling, military, republics, peoples, russia, dpr, donetsk, ukraine]
42	AUG, 2022	0	[military, center, troops, mines, peoples, civilians, shelling, donetsk, dpr, ukraine]
43	AUG, 2022	1	[foreign, committee, prisoners, killed, dpr, russia, pushilin, crimes, war, ukraine]
44	AUG, 2022	2	[february, donbass, military, lugansk, republics, operation, peoples, russia, lpr, ukraine]
49	SEP, 2022	0	[according, mission, troops, shelling, forces, republic, dpr, peoples, donetsk, ukraine]
50	SEP, 2022	1	[shelling, npp, mission, grossi, ukraine, iaea, power, nuclear, zaporozhye, plant]
51	SEP, 2022	2	[republic, situation, liman, city, pushilin, allied, krasny, peoples, forces, ukraine]
56	OCT, 2022	0	[general, npp, iaea, energy, russia, zaporozhye, ukraine, nuclear, plant, power]
57	OCT, 2022	1	[shelling, channel, kherson, reported, telegram, air, city, region, regions, ukraine]
58	OCT, 2022	2	[statement, terrorist, attack, situation, svatovo, trying, security, ministry, defense, ukraine]
63	NOV, 2022	0	[artillery, peoples, republic, troops, spokesman, region, konashenkov, vehicles, russia, ukraine]
64	NOV, 2022	1	[fired, rockets, city, center, troops, dpr, mission, shelling, donetsk, ukraine]
65	NOV, 2022	2	[defense, putin, security, kiev, special, president, operation, military, ukraine, russia]
70	DEC, 2022	0	[past, dpr, troops, reported, russia, forces, peoples, republic, donetsk, ukraine]
71	DEC, 2022	1	[zaporozhye, special, region, putin, operation, vladimir, military, president, ukraine, russia]
72	DEC, 2022	2	[according, kiev, region, reported, explosions, alert, regions, ukraine, raid, air]
77	JAN, 2023	0	[security, mobilization, state, according, kiev, president, minister, military, ukraine, russia]
78	JAN, 2023	1	[kharkov, zaporozhye, according, region, explosions, city, raid, regions, ukraine, air]
79	JAN, 2023	2	[defense, troops, soledar, republic, dpr, peoples, donetsk, forces, russia, ukraine]
84	FEB, 2023	0	[china, ministry, nuclear, military, crisis, foreign, security, kiev, russia, ukraine]
85	FEB, 2023	1	[vehicles, day, peoples, republic, past, artillery, donetsk, russia, forces, ukraine]
86	FEB, 2023	2	[lugansk, tass, according, kremennaya, peoples, shelling, troops, marochko, lpr, ukraine]
91	MAR, 2023	0	[control, republic, peoples, donetsk, troops, city, russia, artyomovsk, forces, ukraine]
92	MAR, 2023	1	[operation, special, biological, russias, systems, troops, according, military, russia, ukraine]
93	MAR, 2023	2	[peoples, fired, reported, republic, attacks, dpr, mission, shelling, ukraine, donetsk]

Table 5.1.1. This table shows the main clusters and words associated with each cluster for each month in the invasion. Notably, either Ukraine or Russia is present in nearly every topic cluster within this corpus. It is interesting to note the change in topic choices as the invasion progressed.

Figure 5.1.1 depicts the topic clusters and most used terms for February 2022. Topic cluster maps for each month are located in **Appendix A Monthly Topic Cluster Maps**.

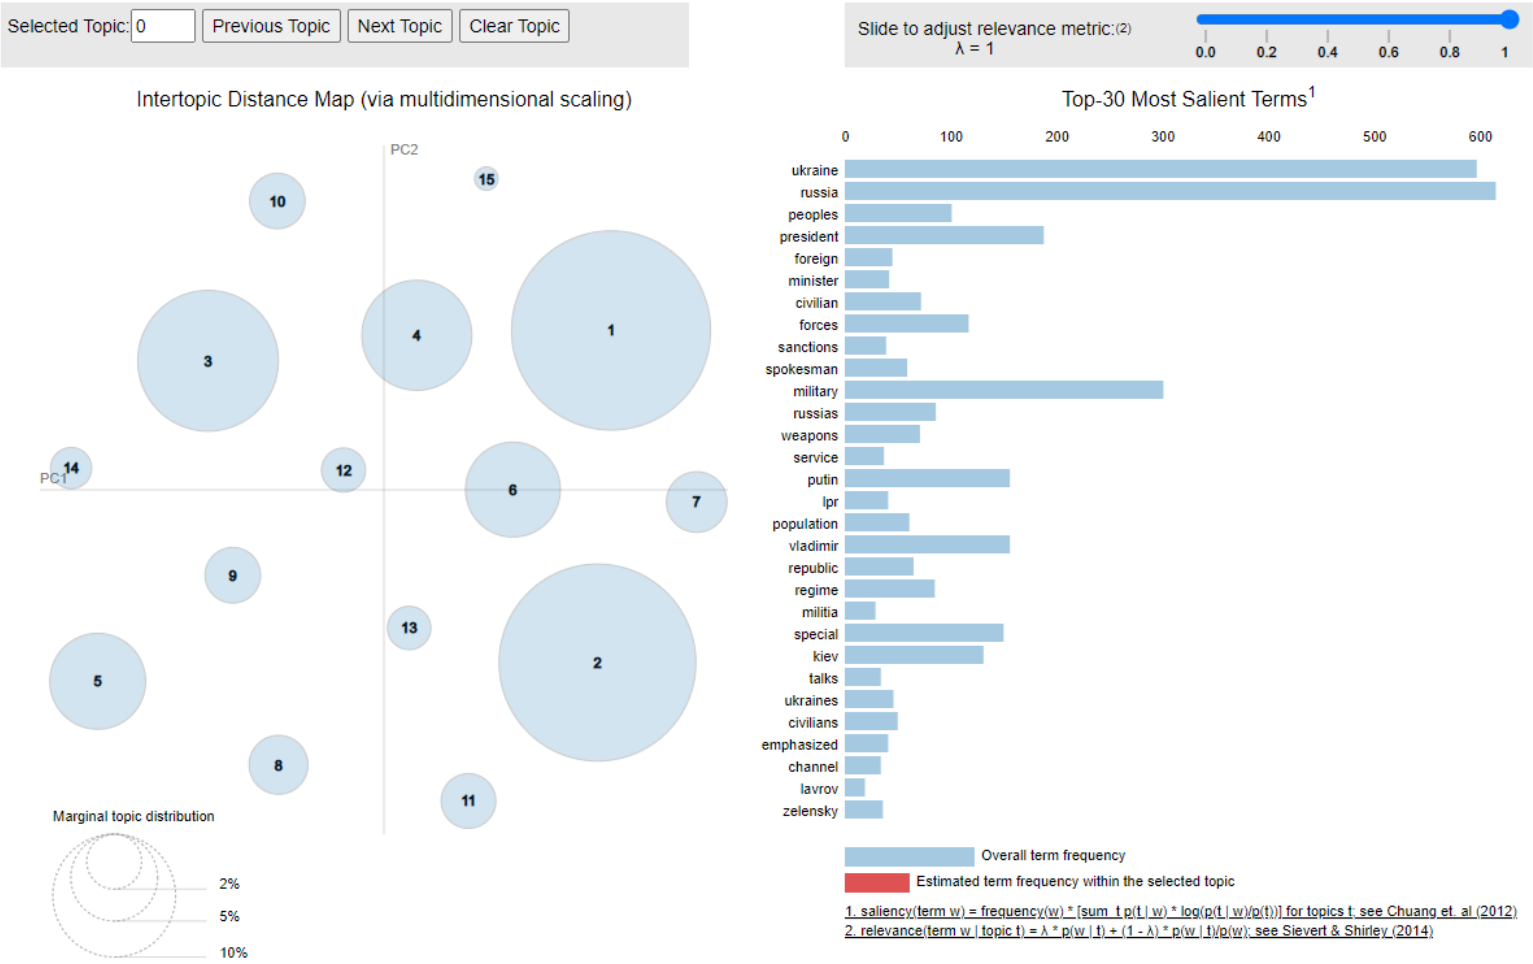

Figure 5.1.1 This figure depicts the topic clusters for February 2022. This has been plotted on a saliency by relevance 2D space. Overall terms are depicted, and it is notable to mention that along with most months containing Ukraine, and Russia as multi-topic terms, Sanctions was a high-frequency word in this month and only resurges later in the invasion timeline.

5.1.2 **Topic Mapping Results: Categorical Resolution**

Thirteen (13) categories have been defined from the article corpus based on the listed tag of the article URL. The categories are Crimea-and-Sevastopol, Defense, Economy, Emergencies, Military-Operation-in-Ukraine, Politics, Russia, Russia's-Foreign-Policy, Science, Society, Sport, Ukraine, and World. Many of these categories have a relatively small corpus and are not present in every month. For example, the category of Sport only has articles in November 2022 and February 2023. Many categories were not present every month throughout the invasion. The categories that were present throughout the invasion proved to be the most valuable and insightful categories. The most insightful categories were: Defense, Politics, Russia, World and to a lesser extent Economy. A summary of each category and prevalence throughout the invasion are presented below.

A. Crimea-and-Sevastopol:

This is the smallest of categories as it only concerns one document in July 2022. The topics and topic keywords are shown in **Appendix B Categorical Resolution Topic Keywords**.

B. Defense:

This is one of the largest categories within this corpus and arguably one of the most insightful. The topics and topic keywords are shown in **Appendix B Categorical Resolution Topic Keywords**.

C. Economy:

This category is present in every month of the invasion but in certain months limited numbers. The topics and topic keywords are shown in **Appendix B Categorical Resolution Topic Keywords**.

D. Emergencies:

This category is present every month, with three months of low document count. The topics and topic keywords are shown in **Appendix B Categorical Resolution Topic Keywords**.

E. Military-Operation-in-Ukraine:

This is a small category as although every article in this corpus is about the Ukraine invasion, there are not many articles in this category. The topics and topic keywords are shown in **Appendix B Categorical Resolution Topic Keywords**.

F. Politics:

This is one of the largest categories within the corpus, both present throughout the invasion timeline and contains a large number of articles each month. The topics and topic keywords are shown in **Appendix B Categorical Resolution Topic Keywords**.

G. Russia:

This category is one of the large categories within the corpus. The topics and topic keywords are shown in **Appendix B Categorical Resolution Topic Keywords**.

H. Russia's-Foreign-Policy:

This is one of the shortest categories within the corpus. The topics and topic keywords are shown in **Appendix B Categorical Resolution Topic Keywords**.

I. Science:

This category contains a relatively small number of articles within this corpus. The topics and topic keywords are shown in **Appendix B Categorical Resolution Topic Keywords**.

J. Society:

This category spans most of the corpus with articles every month. The topics and topic keywords are shown in **Appendix B Categorical Resolution Topic Keywords**.

K. Sport:

This category is one of the smallest and is shown in Figure 5.1.2k. The topics and topic keywords are shown in **Appendix B Categorical Resolution Topic Keywords**.

L. Ukraine:

This category is quite small in terms of the number of documents, and limited insights can be gained from this category. The topics and topic keywords are shown in **Appendix B Categorical Resolution Topic Keywords**.

M. World:

This is one of the largest categories and one of the most insightful. The topics and topic keywords are shown in **Appendix B Categorical Resolution Topic Keywords**.

5.1.3 **Topic Mapping Evaluation**

Topic mapping was evaluated using Perplexity and the negative log_likelihood of the model. Model perplexity and negative log_likelihood are presented in Figure 5.1.3.

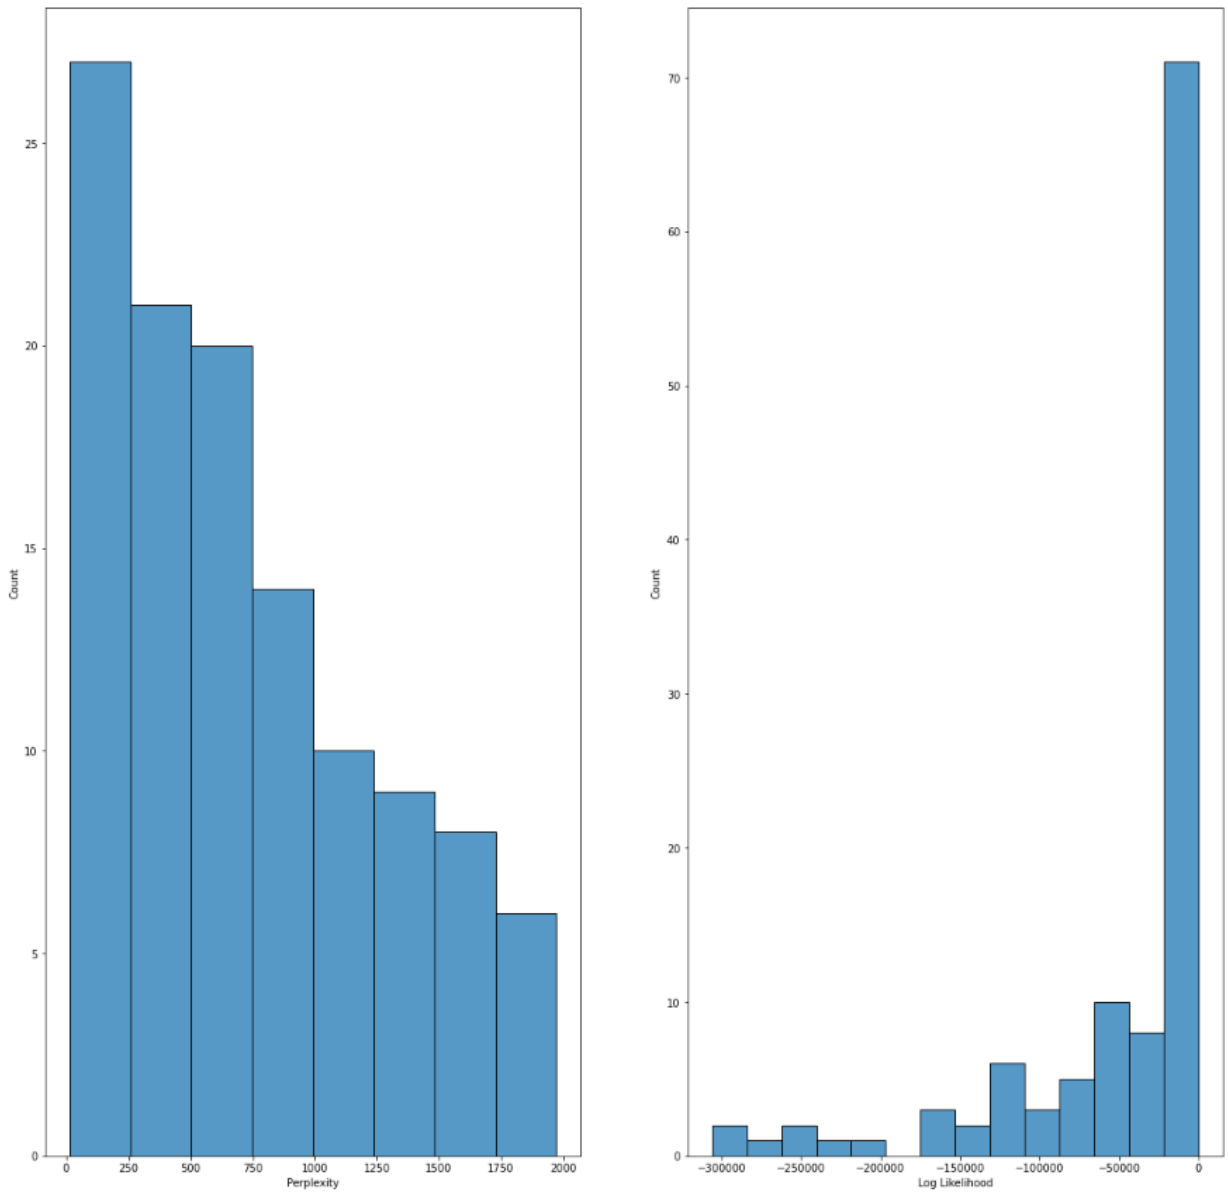

Figure 5.1.3. Displays perplexity (left) of the LDA model and the negative log_likelihood (right) of the model. In terms of perplexity, we have the largest bin containing the range of 0 to 250 perplexity meaning our model can predict the test data well from the training dataset. There are higher perplexities within the model, but this is interpreted as not overfitting the model. In terms of negative log_likelihood, the goal is to minimize this value. This value can be treated as an analog for model loss and as such, minimizing loss without overfitting is the objective of this model.

5.2 **Sentiment Analysis Results**

Sentiment Polarity scores were used to quantify the article's relationship with the Ukraine invasion. The overall polarity score is defined by the compound score (>0.05 for Positive, and <0.05 for Negative). These scores were analyzed on the Monthly and Categorical Resolutions.

5.2.1 **Sentiment Analysis Results Monthly Resolution**

Table 5.2 depicts the sentiment polarity in terms of Positive, Negative, and Neutral, as well as the overall polarity as defined by the compound score (>0.05 for Positive, and <0.05 for Negative).

Year	Time	Negative	Neutral	Positive	Compound	Overall
2022	February	0.114979	0.724176	0.085984	-0.283457	Negative
	March	0.091947	0.763119	0.100525	-0.005555	Negative
	April	0.096339	0.785099	0.089367	-0.122524	Negative
	May	0.093136	0.770284	0.080021	-0.166131	Negative
	June	0.101267	0.779101	0.069143	-0.247876	Negative
	July	0.105789	0.771014	0.067947	-0.237895	Negative
	August	0.120460	0.778366	0.071069	-0.352227	Negative
	September	0.111968	0.771769	0.080353	-0.237632	Negative
	October	0.118001	0.740171	0.071561	-0.318306	Negative
	November	0.122126	0.758789	0.067494	-0.344513	Negative
	December	0.113381	0.749232	0.070735	-0.290968	Negative
2023	January	0.101147	0.689184	0.070256	-0.211831	Negative
	February	0.094739	0.683416	0.077287	-0.116590	Negative
	March	0.098067	0.661968	0.059025	-0.228963	Negative

Table 5.2. This table depicts the results of the sentiment analysis for each month within the corpus. These are sentiment polarity scores in the directions of Positive, Neutral, and Negative, with an overall score of either Positive or Negative. It is worth noting that the overall value was Negative polarity for all months. This is due to the compound score which is the total amount of lexicon grades, normalized between -1 and 1.

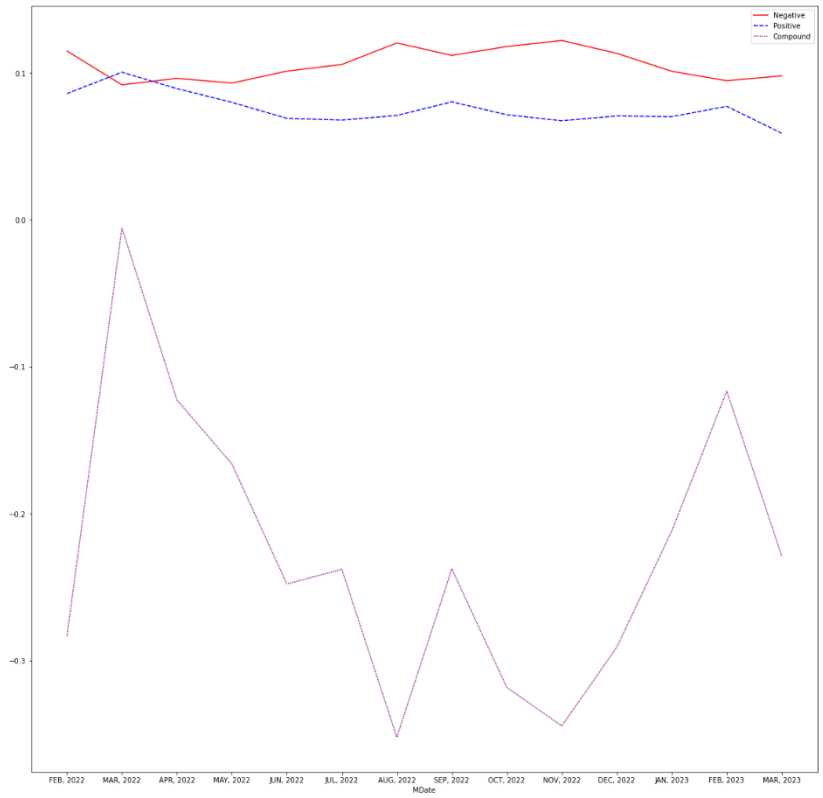

Figure 5.2.1 This figure depicts the negative and positive polarity scores for each month of the invasion. It is interesting to note that one (1) month has a higher positive score with the rest of the months having a greater negative score. Even in October 2022, although there was a greater positive score, the compound value was overall negative. This is because although there was a slightly greater frequency of positive terms, the negative term weights were on average higher thus giving the compound score a slightly overall negative value.

5.2.2 **Sentiment Analysis Results Categorical Resolution**

Sentiment Analysis was performed for each category by month. The categories were grouped into quarters based on the prevalence throughout the corpus. Most categories' compound scores were negative for the majority of the invasion, with a few exceptions. The categories of World, Emergencies, Economy, Science, and Sport, were either partially or largely positive, which is insightful into the narrative being portrayed. The sentiment analysis polarity scores are shown in Figure 5.2.2 below.

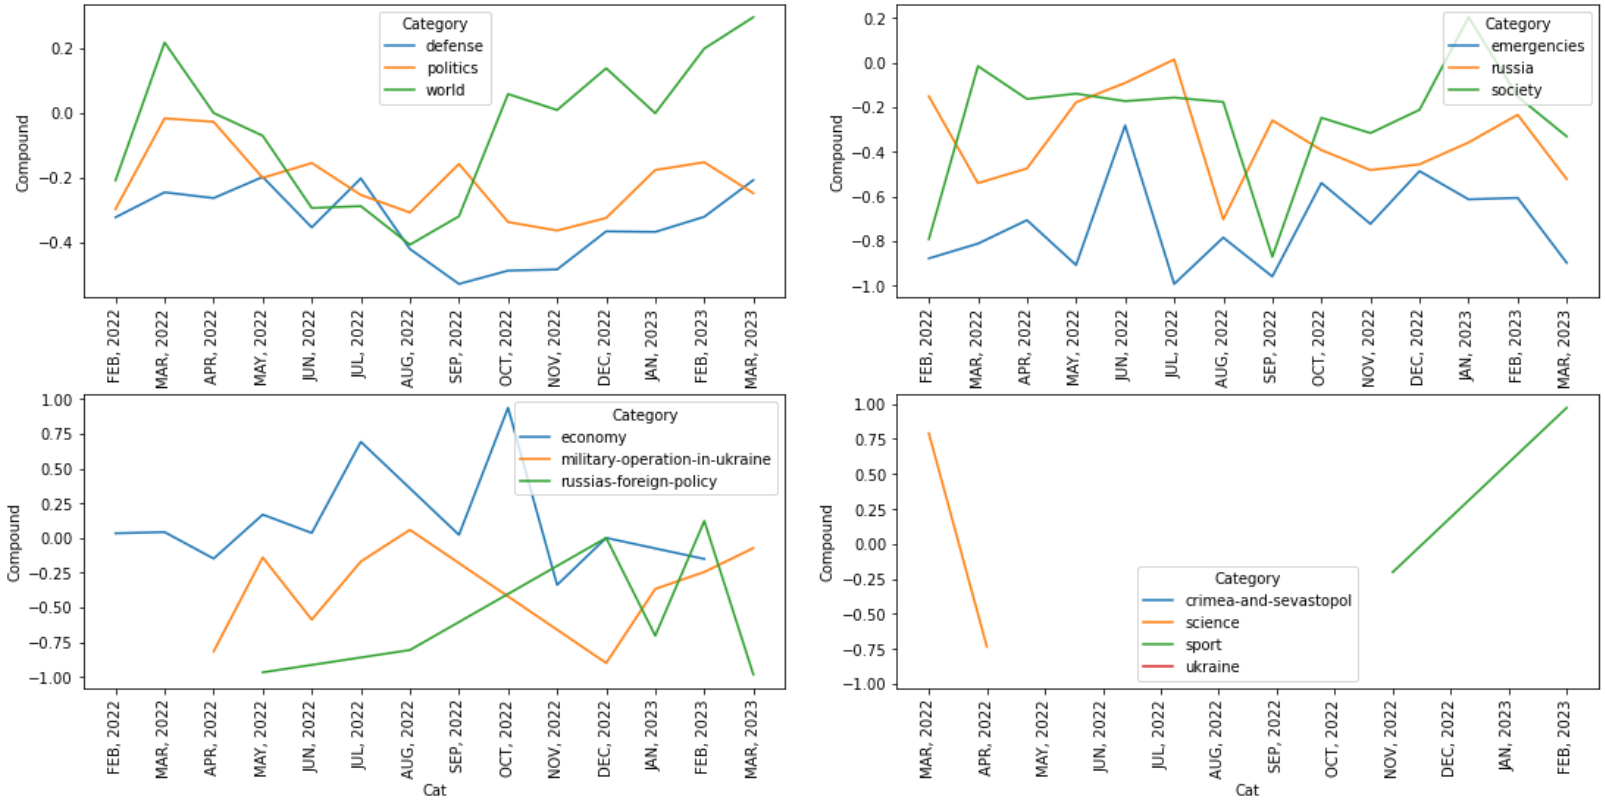

Figure 5.2.2. Displays the sentiment analysis compound polarity scores for every category by month. The categories have been grouped into quarters of descending prevalence throughout the corpus. It is interesting to note that most of the compound scores are negative with the exceptions of World, Emergencies, Economy, Science, and Crimea-and-Sevastopol.

6. Discussion

6.1 **Topic Mapping**

The results from the Topic Mapping have interesting trends. The topic trends will be listed below.

6.1.1 Overall Resolution.

Overall, the propaganda narrative has had a few main topics that have changed throughout the invasion. The main topics of the corpus have revolved around the DPR, LPR, Military, Humanitarian, and Nuclear topics.

Denazification: In the beginning of the invasion neo-Nazis and the Azov militia were a prominent topic mentioned within the narrative. However, as shown in Figure 6.1.1 the usage of the term 'nazi' has dramatically dropped off in the coming months, noting a shift away from framing the conflict as an effort to 'denazify' Ukraine and shift to other main narrative topics.

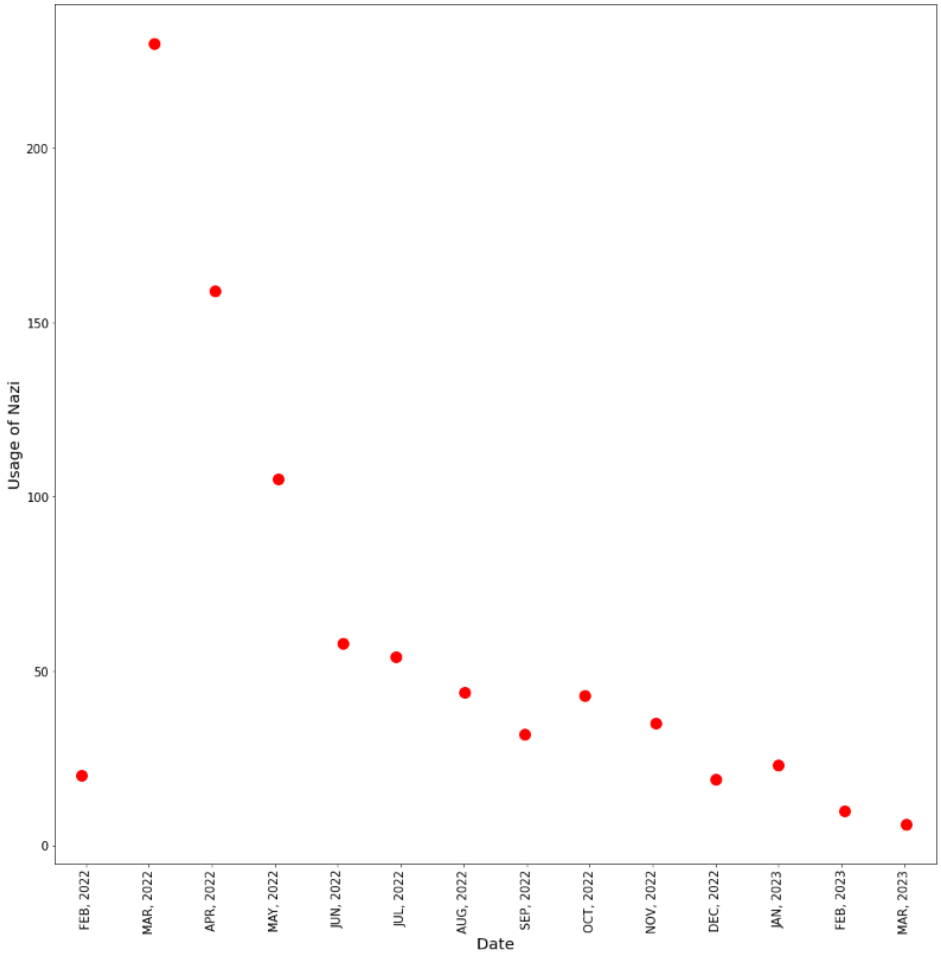

Figure 6.1.1. This figure depicts the usage of the term 'nazi' throughout the corpus. As shown the term was primarily used within March 2022, sharply decreased in usage to July 2022, and then steadily decreased in usage to March 2023. This shows a shift away from framing the conflict as a 'denazification' of Ukraine and towards other narrative elements.

DPR: The Donetsk People's Republic is a region in the northeast with a higher Russian-speaking population. This is one of the regions that was involved in the 2014 incursion into Ukraine. This involved separatist forces, and unofficial Russian forces as well. Currently, this is one of the "annexed" territories and is still on the front lines of the conflict. The current narrative is that the DPR has been attacked by Ukraine and that Russia is "defending" the territory from Ukrainian aggression. This has been one of the most consistent narratives of the invasion.

LPR: The Lugansk People's Republic is similar to the DPR in that it's a northeastern oblast within Ukraine that had a higher Russian-speaking population. This is another oblast that was involved in the 2014 incursion into Ukraine. It is currently one of the "annexed" territories and is one of the current battlegrounds of the conflict. The narrative surrounding this topic has been quite consistent portraying the Ukrainians as aggressors and attacking the Russian-speaking population in the region.

Military: This is a prevalent term used in many articles throughout the invasion. A considerable portion of articles were devoted to the battlefield changes within the theatre, however, most articles reported battlefield victories and ignored battlefield defeats. This is interesting as most military gains of the invasion occurred in the opening months, in which the initial Russian advances halted around July. Russian defeats surrounding the Kharkiv and Kherson regions were not covered thoroughly and seems to show that the battlefield narrative is only presented when gains are being made. This is the case with Bakhmut (Artemovsk) in which case the small gains surrounding the city have been covered well, while the defeats at Vuldehar have not been mentioned.

Humanitarian: This is surprisingly a main topic within the corpus. Surprisingly, battlefield victories/losses are not the greatest aspect of Russian topics and for a time the focus was on humanitarian efforts to occupied regions are the focus.

Nuclear: This has been a consistent topic throughout the invasion. Many times Russia has engaged in nuclear brinksmanship within this article corpus. Along with the capture and fortification of the Zaporozhye nuclear power plant. Hence, why this keyword is prevalent in the overall topic distribution.

6.1.2 Monthly Resolution.

The main topics of the Russian Propaganda narratives have changed throughout the invasion. There have been notable narrative changes.

February 2022:

In the opening month of the invasion, the main narrative topics were involving the pressuring of Kyiv to surrender, the Donbas region, and sanctions against Russia. The most important aspect of this narrative is the sanctions, and how the Russian propaganda focuses on the world sanctioning Russia as an attack on Russia, not as a consequence of their aggressive actions.

March 2022:

This month the Russian narrative focused on the 'Denazification' of Ukraine and the humanitarian aspects in the captured areas within the Donetsk and Lugansk regions. This is notable as the retreat from Kyiv and the multiple military failures are not focused on within this narrative, instead, the narrative has focused on regions of steady Russian advancement and the humanitarian efforts within those regions.

April 2022:

This month Russia focused more of the narrative on military fronts such as the siege of Mariupol, and the specific siege of the Azovstal Steel Plant which contained the remainder of the Azov battalion. This month,

the flagship of the Russian Black Sea fleet the Moskva sank. Russia claims that a fire started on the ship, and sank in a storm while being tugged back to port.

May 2022:

The narrative continued during this time with the siege of Mariupol and the Azovstal Steel Plant, as well as framing the Russian military as defending the DPR from Ukrainian artillery.

June 2022:

The main narrative topics for this month revolved around shelling/artillery strikes on Ukrainian positions and the battle for lysichansk within the Lugansk Oblast. Articles referring to escalation and the provision of HIMARs systems by the US were another major topic this month. This month, the framing of this war as a proxy war between Russia and the West (but the US specifically) was formed and part of the main propaganda narrative. This coincides with the dramatic decrease in the use of 'nazi' within the narrative and is interpreted to be a shift of overall framing from that of 'denazifying' Ukraine to a proxy war with the West.

July 2022:

The narrative this month continues to focus on a proxy war with the West, as well as focusing on HIMARs attacks on supply depots within the DPR and LPR. Framing these attacks as aggressive behaviors against Russian people's/positions.

August 2022:
Within this month the focus continued on the DPR and LPR, and the battles within the oblast. With additional focus on the foreign fighters assisting Ukraine. Alongside this, Russia began framing the Ukrainian government for war crimes by use of mines on the battlefield. This is interpreted to be a response due to the West uncovering the Bucha massacre which occurred at the time when Russia occupied Bucha and is generally considered a war crime. Interestingly, Bucha was not a topic itself this month, as during this month the results from the investigation were publicized, and this is interpreted to be that the Russian government is glossing over the accusations of war crimes being presented against them, and portraying possible war crimes perpetuated by Ukraine instead to their domestic population.

September 2022:

Within September the main focus of the narrative was the shelling/attacks on the Zaporozhye nuclear power plant and the subsequent IAEA investigation. A considerable amount of articles were focusing on the threat surrounding the Zaporozhye nuclear power plant. Another focus was on Dennis Pushilin the head of DPR and his statements surrounding the 'vote' within the region to be annexed by Russia. This was the time the Donetsk, Lugansk, Zaporozhye, and Kherson oblasts were 'annexed' by Russia. It is also the month in which the Kharkiv counteroffensive occurred capturing a large swath of territory. This is notably absent from this month's corpus and is interpreted to be the standard of a military propaganda narrative, as to highlight one's victories and block out one's defeats.

October 2022:

This month was dominated by the attack on the Crimean Bridge through irregular forces. This was framed as a terrorist action by the Ukrainian government and that the Russian mainland/citizenry was under attack. In the Kherson oblast, the defense of the city from Ukrainian attacks/artillery was highlighted, and framed as such that Ukraine was now invading Russia itself as Kherson was recently 'annexed'. Nuclear brinksmanship continued this month, claiming Ukraine was going to use nuclear material or attack the Zaporozhye nuclear power plant to use nuclear means to attack Russian positions. Stating that if that happened Russia would be able to use its nuclear arsenal in the theatre.

November 2022:

This month was narratively dominated by the battle of Kherson and the retreat across the Dniepro by Russian forces. The recapture of the city was framed as a strategic withdrawal instead of a military defeat. Interestingly, this was not framed as Ukraine invading Russia proper, despite the 'annexation' of the region in the previous months. This shows a narrative shift from treating these annexed regions as Russia proper and instead treating the referendum as more of a political formality of conquered territory. This shows a narrative shift to only focus on the DPR and LPR and moves the goalposts again for the objectives of the invasion.

December 2022:

This month was narratively dominated by the rocket strikes against Ukrainian electrical/heating infrastructure. This was framed as General Surovkin attacking military structures around Kyiv. Continuing nuclear brinkmanship continued referring to Zaporozhye nuclear power plant and retaliation to any threat to the structure.

January 2023:

This month militarily was dominated by the battle of Artemovsk (the former Soviet name for Bakhmut) and its surrounding villages. In this case, the village of Soledar was captured by Wagner forces supported by Russian artillery. This was framed as a great victory and much of the monthly corpus was reporting this battle.

February 2023:

The main topics for this month revolved around the China peace plan and diplomatic mission. Which was reported favorably by TASS news. This month continued the coverage of the battle of Artemovsk (the former Soviet name for Bakhmut) and the ongoings of that battle.

March 2023:

The battle of Artemovsk continued to be one of the main topics for this month, as well as smaller attacks within the DPR and LPR oblasts.

6.1.3 Categorical Resolution

Each category has undergone topic mapping and the narrative in these respective categories has changed throughout the conflict.

Defense:

This is the category that chronicles much of the battlefield changes in this conflict. Much of that has been chronicled in the monthly resolution of the conflict. In broad strokes, the narrative in this regard has been: focusing on the imminent victory of Russian military forces in the beginning, shifting to the defense of the DPR and LPR from aggressive Ukrainian attacks for March and April 2022. Then again shifting to focus on the attacks and sinking of the Moskva in May 2022. Then focusing on the siege and capture of Mariupol and the defeat of the Azovstal Steel Plant. Afterward focusing on defensive actions within the DPR and LPR as well as the first-time seeing coverage of the battle of Artemovsk (the former Soviet name for Bakhmut). HIMARs were a strong topic at this time and the framing of the conflict was interpreted to have changed. In the defense prong of the propaganda narrative, this was representative of shifting goalposts from instead capturing the entirety of Ukraine as a main goal, to holding and incorporating currently occupied territories. Much of the rest of this category chronicles Russian victories and generally ignores or underplays large Russian defeats such as the Kharkiv counteroffensive and retreat from Kherson. By,

November this prong of the propaganda narrative focused on rocket attacks against Ukrainian infrastructure and the battle of Artemovsk and the capture of villages surrounding the city. This is the current state of this prong of the narrative. Overall, the major narrative changes have revolved around shifting military goalposts to the capture and retention of smaller and smaller areas of Ukraine, now focusing on the full capture and retention of the Donetsk and Lugansk oblasts.

Politics:

This prong of the narrative tended to focus surrounding the politics of the invasion and can sometimes be used as a catch-all category for many different topics. Much of this prong is related to statements made by Sergey Lavrov (Foreign Minister of Russia), General Igor Konashenkov (Chief Spokesperson for the Ministry of Defense), and Dimitry Peskov (Press secretary of the Russian Federation). This prong of the propaganda narrative begins with topics relating to the imminent defeat of Kyiv and the hopes for the surrender of the city and by proxy the nation. In March 2022 'denazification' of Ukraine was the goal of the invasion and all actions were done in that endeavor. Many topics were discussed within this month, ranging from chemical weapons usage, Ukrainian biowarfare laboratories, trying to frame Ukraine as the perpetrator of the Bucha massacre, US aggression in the form of sanctions, and overall framing of the conflict of Russia vs the world. This period of February 2022, to June 2022 is a confusing and conflicting time for the propaganda narrative and is interpreted to be a time of Russian media trying many different angles and seeing which ones resonate the best with the Russian public. By June, the narrative shift has begun and became a consolidation of narrative arcs relating to this war being a proxy war between the West (US, EU, and associated allies) and Russia. From June to November this prong has been generally defined by levels of nuclear brinksmanship and detractions of Western supplies to Ukraine. After November this prong focuses on the rocket attacks against Ukraine's infrastructure and the shutoff of gas supplies to the EU. Focusing on framing the propaganda as the EU population being frozen and that the people will want the war to end but the powers that be prolonging the conflict.

World:

This prong of the propaganda narrative focuses on outside forces and their inputs to the framing of the conflict. This prong began focusing on the sanctions placed against Russia in the opening days of the invasion. This prong also focused on the negotiations in February and March 2022, as well as the focus on humanitarian efforts and the humanitarian corridor proposal. After March much of the topics were centered around foreign weapon shipments into Ukraine and the increase of sanctions against Russia. Specifically targeting the US as the main antagonist to Russia's goals in the invasion. Much of the narrative is similar to the Politics prong narrative with certain exceptions. This prong has focused more on the involvement of Lukashenko and later Beijing in the conflict favorably and has had a strong anti-US sentiment throughout the invasion. This is interpreted to be that this prong of the narrative has gained more prominence as the overall narrative shifted away from 'denazification' towards the proxy war with the West.

Emergencies:

This prong of the propaganda narrative focuses on emergencies occurring within the DPR, LPR regions within Ukraine, and surrounding Russian regions such as Belgorod. Since the beginning of the conflict much of this prong of the narrative focused on civilian deaths within the DPR and LPR, such as strikes against hospitals, shelling/attacks on refinery equipment, and attacks on electricity infrastructure. This narrative is quite consistent throughout the invasion and outside of framing Ukraine as aggressors does not change.

Russia:

This is a smaller category with similar narrative points as the politics narrative prong. It is interpreted to be that the team that writes for the 'Russia' section is a subsidiary of the 'Politics' writers and as such all narrative changes are interpreted to be similar if not the same.

Society:

This prong of the propaganda narrative has focused on the civilian efforts/situations within and outside of Ukraine. In February 2022, the focus of this prong was on the 'liberation' of the peoples of the Donbas and Ukraine. Shifting the focus to 'denazification' and the Azov battalion within March of 2022, as well as focusing on the humanitarian efforts to the captured regions. From the time of March 2022 to December 2022, much of this prong was focused on the Zaporozhye nuclear power plant and damage to the plant. The shift away from humanitarian efforts to focusing on the Zaporozhye nuclear power plant is interpreted to be a refocus on Ukraine threatening nuclear accident by attacking the plant.

Economy:

This prong of the propaganda narrative has focused on the economic situation of Russia and later on the economic situations of important countries such as Turkiye, the United States, Mexico, and Ukraine. From February 2022 through March 2022 the focus was on the sanctions brought against Russia and the banning of goods exported from Russia. This was the focus but was framed as futile attempts to stop the Russian economy. After March this prong of the narrative focused on the resilience of the Russian economy in the face of the sanctions, as well as economic downturns in 'unfriendly' nations' economies. This is the current narrative of this prong.

Military-Operation-in-Ukraine:

This is a small category and as such seems to be a relatively forgotten prong of the narrative. The topics within this category are reflective of the Defense prong and are interpreted to be a smaller component of the Defense writing team.

Russia's-Foreign-Policy:

This is a small category that seems to be related to the Society category. The focus of this prong was hostages within the Azovstal Steel Plant, later transitioning into focusing on inflicting a defeat on the US and the West.

Crimea-and-Sevastopol:

This is the smallest of categories and seems to be a single article posted in July. Seemingly this category was a short-lived experiment on creating a team focusing purely on Crimea and Sevastopol. Interestingly, many events have occurred within the peninsula however these events have been reported on by the Defense prong instead. Continuing the framing that Russia is being attacked and fighting in defense of itself, instead of being the aggressor.

Science:

This is a small category consisting of two articles, one in March 2022 and one in April 2022. Although this is the science category, both of these articles revolve around European employees fleeing the country in March, and a 'nazi' junta taking over the Kyiv government in April.

Sport:

This small category has focused on the banning of Russian athletes from international sports and furthers the narrative regarding "Russia vs West/World". The most recent events regarding the admittance or non-admittance of Russian athletes into the 2024 Olympics under the Russian flag.

Ukraine:

This category is a single article in April and focuses on the friendly peoples of Russia and Ukraine. Furthering the narrative that Ukraine belongs with Russia and that the West is aggressive and stealing Ukraine away from Russian influence.

6.2 **Topic Mapping Evaluation**

The topic models were evaluated using the perplexity and negative log_likelihood metrics.

Perplexity: Most bins for perplexity were near 0 with a maximum perplexity of 1800. This is a relatively good fit for the model and represents a good fit without overfitting.

Negative log_likelihood: The vast majority of LDA models contained a negative log_likelihood near 0. As negative log_likelihood is an analog for model loss, this is a promising result and shows a good fit without overfitting.

6.3 **Sentiment Analysis**

The sentiment analysis was performed on the Monthly and Categorical data resolutions. Overall, the sentiment compound scores were negative, however, there were a few months with certain categories that were positive, influencing the framing of the propaganda narrative.

Monthly Resolution:

In the monthly resolution all months from the beginning of the invasion had a negative compound score and as such are interpreted to be negative outlooks regarding each monthly corpus. The month that was the most neutral was March 2022 in which case this was the peak of the original propaganda narrative. The strongest component for all months toward the compound score was the neutral polarity, which is to be expected of a news organization. As the coverage would be expected to be reporting situations and not expressing personal sentiments. As such this is why the neutral score was generally disregarded.

Categorical Resolution:

The sentiment analysis on this scale has shown some interesting results. Most categories/prongs of the propaganda narrative were negative and that has implications surrounding their respective prong. As such Defense, Politics, and Russia prongs are affected. Although most categories were primarily negative there were a few exceptions. The notable categories were: World, Society, Economy, Science, and Sport.

Defense:

The defense prong of the propaganda narrative had a negative sentiment compound score for all months of the invasion. However, based off of the intensity of the score relates to the perceived battlefield successes or lack thereof in the timeline. For example, the highest polarity scores in this category reflect the Russian advances early in the invasion, peaking in July, and the most negative scores reflect the losses (Kharkiv counteroffensive, and Kherson) from August 2022 through November 2022. After November 2022, the sentiment scores have been steadily rising, reflecting the small gains surrounding the battle of Artemovsk (the former Soviet name for Bakhmut).

Politics:

The political prong of the propaganda narrative has entirely contained negative compound sentiment polarity scores. The highest sentiment scores reflect the beginning of the invasion in which the language was about the brotherly peoples of Ukraine and Russia and how Ukraine is ‘supposed’ to be part of Russia. Despite narrative changes, the negative sentiment scores are relatively similar throughout the invasion.

Considering the topics of this prong, the negative sentiment scores are interpreted to be negative language regarding other countries' responses to the invasion.

Russia:

This is a relatively small category and is related to the Politics prong of the propaganda narrative. Although in July the sentiment scores are slightly positive, the amount of documents is too small to make a large-scale narrative interpretation from this data point.

World:

The sentiment scores regarding this prong of the propaganda narrative reflect Russian responses to foreign nations' inputs/reactions to the Ukraine invasion. The beginning of the invasion had high positive sentiment scores which quickly dropped when reacting to the Western shipments of weapons and implement of sanctions on Russia. The scores have become positive in October 2022, regarding the weapons shipments from Iran and the increasing public friendliness of China.

Society:

This prong of the propaganda narrative regarding primarily civilian aspects has been relatively neutral with slight negative polarity trends. As the topic is often related to civilian deaths this is to be expected. January 2023, is a notable exception which seems to be related to positive articles about aid to captured regions.

Economy:

This prong of the propaganda narrative is consistently positive. Interpreting this, in conjunction with the topics of that corpus, suggest that the narrative can be summarized as such: Russia is beset by sanctions levied against it from the Western world, but the Russian economy is weathering the sanctions while the West is on a downturn.

Science:

This category had a one positive sentiment polarity score and one negative. The corpus for this category was two articles, so each data point reflects each article. The positive data point reflects language surrounding European employers and employees leaving Ukraine due to the invasion, and the negative data point is reflective of the article focused on a nazi junta controlling the government of Ukraine.

Sport:

This category is as well quite small in that each data point is a separate article. Both sentiment polarity scores are either neutral or positive, as in November 2022, and February 2023 have eased restrictions on Russian athletes in international competitions.

6.4 **Narrative Trend Summary**

The Russian propaganda narrative is a multi-pronged narrative that employs different ideas in different prongs, all simultaneously working to support or justify the Russian invasion of Ukraine. The overall propaganda narrative around the invasion has shifted drastically. The pretense of the invasion was related to the 'denazification' of the country coupled with problems arising in the Donetsk and Lugansk oblasts. Once the invasion began, and sanctions were implemented the narrative adjusted to focus more on the role of the West and the US and the decrease in rhetoric about 'denazification' of Ukraine. During this phase of the narrative, Russia portrayed itself as a nation 'denazifying' Ukraine, while under the effect of sanctions that would not work and advancing on the battlefield.

The transition period occurs here (April 2022, to June 2022) where many smaller narratives are tested out in the Political prong of the narrative, and eventually finding one that resonates with the Russian public the best.

The next phase of the narrative shifted away from the 'denazification' of Ukraine and focused on Western support of weapons and sanctions to Ukraine. This was during the time of halted advances of the Russian military. Russia portrayed itself in this phase as fighting a proxy war with the West, while defending the people of the DPR and LPR from Western aggression, while weathering sanctions that are not working and consistently provoking the images of nuclear retaliation.

The current phase of the narrative has retained many aspects of the previous narrative except for perceived positive battlefield objectives surrounding Artemovsk (the former Soviet name for Bakhmut).

7. CONCLUSIONS AND IMPLICATIONS

This study analyzed Russian media news articles by performing Topic Mapping and Sentiment Analysis to understand the Russian propaganda narrative and its narrative shifts surrounding the invasion of Ukraine. This was done using Latent Dirichlet Allocation for Topic Mapping and using the nltk and VADER libraries in the implementation of sentiment analysis. These topics are mapped showing a narrative shift away from vilifying the Ukrainian government towards their focus on weathering economic sanctions, humanitarian efforts in occupied regions, and a focus on the defense of the DPR and LPR.

Conclusions from this study include:

- The current general Russian narrative seems to be as follows: Focusing on the defensive actions of the DPR and LPR, weathering economic sanctions while Western nations are entering an economic downturn, focusing on victories surrounding Artemovsk (Bakhmut), and ignoring the battlefield defeats and personnel losses.
- Even though most military gains of the invasion occurred in the opening months, Russian advances halted around July. With limited Russian military advances around Artemovsk (Bakhmut), the defense prong of the propaganda narrative focuses on this battle. All the while the majority of articles focus on other prongs of the propaganda narrative where different aspects of the war imply to the Russian public that Russia will weather the economics of the Western sanctions and keep up nationalism to continue the war effort.
- The general Russian Narrative shifted from focusing on Neo-Nazis as the prelude to the invasion, then going through a transition period shortly after April, then shifting to a multi-pronged narrative regarding nuclear threats and humanitarian efforts in the DPR and LPR near the middle of the invasion, to finally focusing on the defense of the DPR and LPR, an increase in nuclear threats and a focus on a proxy-war with the West.
- In this conflict, the Russian propaganda narrative has been reactive, not proactive.

8. CAVEATS/FUTURE WORK

This is an important topic to quantify, and one of the most multi-faceted topics to quantify.

Some of the caveats about this analysis are:

- This type of analysis does not lend well to predictive behavior about real-world actions.
- Many elements of this invasion are not chronicled, not for the lack of knowledge by the author, but of the lack of coverage by Russian sources.

Future steps to understand the Russian propaganda aspects in their entirety would include:

- Applying a parallel study of social media/Telegram channels regarding this war. This is where relatively unfiltered reactions to media occur within Russian cyberspace, as well as where many Russian Mil-bloggers disseminate their media. This study could include an analysis of the articles and videos released on Telegram, as well as an analysis of the comments reacting to those media. This is important as this is the space younger Russians consume much of their media.
- Applying a parallel study of Russian Television programs and visual podcasts. An example is Vladimir Solovyov, as these commentary shows are influential to older generations of Russian demographics.
- Collating all parallel studies into a holistic view of the Russian Narrative and quantification of propaganda outreach.

41	MAR, 2023	politics	2	[donetsk, dpr, peoples, troops, the, city, russia, artyomovsk, forces, ukraine]

Figure B6. This figure depicts the first three topic clusters and ten (10) associated topic keywords. It is important to note the common terms throughout this corpus such as Russia, Ukraine, DPR, LPR, and Nuclear. It is interesting to note that this invasion was called the Special Military Operation, the term “war” is present within March 2023, possibly noting a shift in narrative framing.

[{'title': 'Kherson Region head denies reports about withdrawal of Russian troops from Novaya Kakhovka',
  'link': 'https://tass.com/emergencies/1593733',
  'uploadtime': '23 MAR, 15:13',
  'content': 'GENICHESK, March 23. /TASS/. Russian military forces remain in Novaya Kakhovka in the Kherson Region, Vla
dimir Saldo, the region\'s acting governor, said on Thursday, adding that the information circulated by the Ukrainian a
rmy general staff was fake news.\n"I officially declare that all Russian troops in Novaya Kakhovka, as well as in other
places of deployment on the left bank of the Dnieper River, remain in their positions. I think the fake news from our e
nemy’s general staff was motivated by the weak PR effect generated by [Ukrainian President Vladimir] Zelensky\'s visit
to the Kherson Region. They need more virtual victories," the acting governor wrote on his Telegram channel.\nThe head
of the Novaya Kakhovka municipal administration, Vladimir Leontiev, also dismissed reports about the withdrawal of Russ
ian troops from the city. "Ukrainian propagandists planted yet another fake story, claiming that units of the Russian A
rmed Forces were leaving Novaya Kakhovka," he said.\n"Naturally, this is a lie, which I state with full authority. Howe
ver, today, indeed, something has disappeared from our city - the signal of Ukrainian mobile communications and radio,
which the enemy was transmitting here from Berislav using a portable mobile system," he was quoted as saying on the Tel
egram channel of the Kherson Region administration. As became known from military sources, the transmission was knocked
out by a direct hit.\nLeontiev noted that all institutions and authorities in Novaya Kakhovka are operating on a routin
e basis. "The administration’s employees will head to work in the morning, Novaya Kakhovka residents will receive their
pensions and social benefits at the usual sites. Utilities and emergency services are on duty. There is enough work to
do," he summed up.\nMore than 20,000 residents remain in Novaya Kakhovka. Among them are many pensioners and people wit
h low mobility. The city is shelled by Ukrainian artillery almost on a daily basis.'},
 {'title': 'Zelensky’s trip to Kherson Region another imitation of victory — official',
  'link': 'https://tass.com/world/1593745',
  'uploadtime': '23 MAR, 15:23',
  'content': 'GENICHESK, March 23. /TASS/. Reports about Ukrainian President Vladimir Zelensky’s visit to the Kiev-cont
rolled right bank of Dnieper in the Kherson Region are connected to Kiev’s intent to shift focus from the negative situ
ation on the frontline and the new Russian-Chinese agreements, says Alexander Malkevich, advisor to the Acting Head of
the Kherson Region.\nEarlier on Thursday, Zelensky’s press office announced that the Ukrainian president visited Kherso
n, the settlement of Posad-Pokrovskoye and a regional power facility.\n"The Ukrainian people are extremely unlucky to h
ave a president, whose entire point of existence is victories in the informational sphere. That is, when the situation
on the frontline is difficult for Ukrainian armed forces, and when Russia signs long-term agreements with China, effect
ively defining the new system of international relations, Zelensky tries to force himself on agenda by his staged trip
s," Malkevich said.\nHe also connected Zelensky’s trip to the preparation for the potential Ukrainian counteroffensiv
e.\n"I would not be surprised if it [Zelensky’s trip - TASS] focused on preparation of another slaughter of people. Bec
ause Kiev desperately needs a counteroffensive for its report to Western puppeteers. Best-case scenario would be to sho
w some success. Worst-case scenario: to force the West to ship new, more lethal weapons at the cost of deaths of its ow
n soldiers. Kiev is not concerned over people’s lives - we have been seeing for a long time already," he said.'},
 {'title': 'Over 70 munitions fired by Kiev troops towards DPR in past day',
  'link': 'https://tass.com/emergencies/1593787',
  'uploadtime': '23 MAR, 19:04',
  'content': 'DONETSK, March 24. /TASS/. The Ukrainian armed forces fired a total of 74 munitions towards populated are
as in the Donetsk People’s Republic (DPR) on Thursday, the DPR mission to the Joint Center for Control and Coordination
of issues related to Ukraine’s war crimes said in the early hours of Friday.\n"Over the past day, the mission has regis
tered a total of 18 shelling attacks by Ukraine," the mission said on its Telegram channel, adding that those attacks i
nvolved 74 152mm and 155mm artillery shells.\nThe Ukrainian shelling attacks targeted Donetsk, Golmovsky, Yasinovataya
and Yelenovka.\nFour civilian residents of Donetsk were injured as a result of those attacks.'},

{'title': 'Kiev troops fire three HIMARS rockets towards Gorlovka — DPR',
 'link': 'https://tass.com/emergencies/1593807',
 'uploadtime': '23 MAR, 23:11',
 'content': 'DONETSK, March 24. /TASS/. The Ukrainian military fired three rockets from a US-made HIMARS multiple-launch rocket system on Friday, targeting the city center of Gorlovka, the DPR mission to the Joint Center for Control and Coordination of issues related to Ukraine’s war crimes said.\n"At 02.04 a.m. local time, three HIMARS rockets were fired towards Gorlovka (central city district)," the mission said on its Telegram channel.'},
{'title': "Medvedev says inappropriate to talk about timeframes for special op's end",
 'link': 'https://tass.com/politics/1593819',
 'uploadtime': '24 MAR, 00:12',
 'content': 'MOSCOW, March 24. /TASS/. Deputy Chairman of the Russian Security Council Dmitry Medvedev believes that it is inappropriate to talk about timeframes for the end of the special military operation, since such assessment could only be provided by Russian President Vladimir Putin.\n"As for the timeframes, I hope that you do not expect me to give you an answer, because that would be inappropriate. Let us not get ahead of ourselves," Medvedev said in an interview for Russian mass media and social media users. He underscored that "only the supreme commander-in-chief can give assessments of the progress or the timeframe."\nAccording to the official, a lot of factors may affect the timeframe for the end of the special military operation.\n"I will only say what is obvious in itself: the Russian Federation is fighting not Ukraine, not the Ukrainian semi-Nazi or Nazi regime - our country is fighting the 3.6-million NATO army. They take part, of course, in this hybrid conflict, and they are effectively no longer hiding it," Medvedev said.\nHe also noted that NATO is comprised of countries with a total population of 800 million people, and it is these countries that ship vehicles, ammunition and money to the Kiev regime.\n"They also do the training, they are about to come to begin deploying something, and so on," he added.\nSpeaking about the results of the special operation, Medvedev noted that they stem from the President’s decisions.\n"It is necessary to achieve all goals on protection of our territories - that is, territories of the Russian Federation. It is necessary to throw away all foreigners present there in the wide sense of this word, to establish a buffer zone that will make it impossible to use any short-and medium-range weapons, meaning about 70-100 kilometers, to demilitarize it, if we talk about the military component. And, should it not be enough, then it would be necessary to make some other decisions," the politician said. "Nothing could be ruled out here. Should it be necessary to reach Kiev, then we will have to go to Kiev; should it be necessary to reach Lvov, then we will have to go to Lvov in order to eradicate this contagion," he concluded.'},
{'title': 'Ukrainians using increasingly more war jets near Kupyansk — LPR officer',
 'link': 'https://tass.com/politics/1593837',
 'uploadtime': '24 MAR, 01:04',
 'content': 'LUGANSK, March 24. /TASS/. Air observation posts of the Russian army are seeing increasingly frequent use of aircraft by Ukrainian forces in the Kupyansk direction, Andrey Marochko, a retired lieutenant colonel in the Lugansk People’s Republic’s (LPR) People’s Militia, told TASS on Friday.\n"Our air defense observation posts have lately reported increasingly frequent flights of enemy jets," he said, citing Russian reconnaissance data.\nThe Ukrainians use Soviet-made Su-24, Su-27 and MiG-29 aircraft in service with Ukraine’s army, depending on their goals, Marochko added.\nOn Thursday, Defense Ministry Spokesman Lieutenant-General Igor Konashenkov reported that the western battlegroup had stricken the Ukrainian army units in the Kupyansk direction, destroying roughly 70 enemy troops in the past 24 hours.'},
{'title': 'Ukrainian troops receive more NATO-made artillery in Donetsk direction, says LPR officer',
 'link': 'https://tass.com/politics/1593839',
 'uploadtime': '24 MAR, 01:36',
 'content': 'LUGANSK, March 24. /TASS/. Russian reconnaissance units have detected the deployment of more artillery, including NATO-made pieces, at Ukrainian positions near Donetsk, Andrey Marochko, a retired lieutenant colonel in the Lugansk People’s Republic’s (LPR) People’s Militia, told TASS on Friday.\n"Various artillery systems, namely towed howitz

ers, as well as self-propelled and rocket artillery, have arrived near the localities of Minkovka, Markovo and Chasov Y ar. Those are both Soviet-and NATO-made artillery systems," he said, referring to Russian reconnaissance data.\nMarochk o said the weapons might have been sent from reserves of the Ukrainian command.\nDefense Ministry Spokesman Lieutenant- General Igor Konashenkov reported on Thursday that Russia’s southern battlegroup had destroyed over 250 Ukrainian troop s in the Donetsk area in the past day.'},
{'title': 'Russia gives UNESCO data on Ukrainian shelling of civilian facilities — Russian envoy',
'link': 'https://tass.com/politics/1593841',
'uploadtime': '24 MAR, 01:37',
'content': 'PARIS, March 23. /TASS/. Foreign diplomats in UNESCO have an opportunity to put together an objective pic ture of what’s happening in Donbass thanks to the data on damage from Ukrainian shelling of civilian facilities that ar e provided by the Russian delegation, Rinat Alyautdinov, Russia’s envoy to UNESCO, told TASS in an interview.\n"Data on the affected facilities that are received from the authorities of the DPR and LPR, we regularly transfer them to the UN ESCO Secretariat, as well as to the delegations of the member countries. As our foreign colleagues tell us, thanks to s uch materials, they have the opportunity to put together an objective picture of what is happening in Donbass," he sai d.\nAccording to Alyautdinov, the data is about residential buildings, hospitals, educational institutions and cultural institutions, among other things. As a reminder, he said that such shelling has been going on for almost nine year s.\n"The information provided by us also assures that the Russian armed forces in the course of the special military op eration comply with the norms of international law and don’t strike facilities that are not used for military purpose s," the diplomat went on to say.'},
{'title': 'Use of depleted uranium munitions to bring down Ukraine’s agro-exports — Russian military',
'link': 'https://tass.com/defense/1593973',
'uploadtime': '24 MAR, 05:57',
'content': 'MOSCOW, March 24. /TASS/. Kiev’s use of depleted uranium munitions may bring down Ukraine’s agricultural exports for decades, if not centuries, Chief of Russia’s Radiation, Chemical and Biological Protection Troops Lieutenan t General Igor Kirillov said at a briefing on Friday.\nAccording to him, the use of depleted uranium munitions will con taminate large crop production areas in Ukraine. Motor vehicles will spread radioactive substances to other parts of th e country, the general pointed out, speaking about the consequences of Kiev’s possible use of depleted uranium ammuniti on.\n"Apart from affecting the country’s population, it will also cause great economic damage to Ukraine’s agricultural sector, namely crop and animal production, bringing agricultural exports down for decades, if not centuries, to come," Kirillov added.\nEarlier, the UK’s Minister of State for Defense Annabel Goldie said, in a written response to an inqui ry by a member of the House of Lords, that the British authorities would provide Ukraine with shells containing deplete d uranium, which were particularly effective against armored vehicles. The British Ministry of Defense called depleted uranium "a standard component" of armor-piercing ammunition.'},

'content': 'MELITOPOL, March 27. /TASS/. Ukraine continues to regroup its forces in the Zaporozhye direction, deploying up to 75,000 servicemen, despite serious losses during last week\'s attempted offensive, Vladimir Rogov, chairman of the \'We Are Together with Russia’ movement, told TASS on Monday.\n"Taking into account the military in the Ugledar direction, there is a total of at least 75,000 [Ukrainian] servicemen in the Zaporozhye direction. <...> The Ministry of Integration (the Ukrainian Ministry of Reintegration of Temporarily Occupied Territories - TASS) has changed the status of the city of Zaporozhye itself. The Zaporozhye district (with its capital in Zaporozhye - TASS) was moved to the list of areas of possible combat operations from the list of areas of active combat operations. <...> This shows that they do not expect us to come, and the conclusion is that they will go themselves, <...> that is they have hope that they can move the front line," Rogov said.\nHe specified that an attempted Ukrainian offensive on March 23 was thwarted by Russian forces. Up to 400 servicemen were destroyed. "The timing of this offensive was supposed to be for the March 23-24, that is the EU summit on Ukraine. Our artillery and multiple rocket launchers shelled their positions. More than two dozen targets were hit, these were large targets: heavy equipment, Ukrainian military locations. <...> Even after these losses Ukraine is regrouping forces in the Orekhovsky direction," Rogov pointed out.\nThe politician earlier told TASS that the Ukrainian armed forces were preparing an attack on Melitopol in order to reach the Sea of Azov and cut the land corridor to Crimea, which were supply routes for Russian forces and the population of the peninsula. According to his assessment, the Ukrainian military will be ready for active operations in Zaporozhye in late March or early April.'},

"It seems that they expected this to be just military tourism: to come, hang out, show off, get some money, and then leave. It turns out everything is much more serious for them than they imagine," Sokol stressed.\nThe presence of foreign mercenaries in the Ukrainian army has been reported since last spring, with Polish mercenaries being mentioned most often.'},
{'title': 'Russian environmentalists condemn UK decision to send depleted uranium shells to Kiev',
'link': 'https://tass.com/politics/1595003',
'uploadtime': '27 MAR, 08:59',
'content': 'MOSCOW, March 27. /TASS/. Great Britain’s plans to supply depleted uranium (DU) weapons to Ukraine will lead to mass health problems among the civilian population, as DU shells are chemical weapons, an environmental commission under Russia’s Civic Chamber said in a statement on Monday.\n"The Commission on Ecology and Environmental Protection of the Russian Civic Chamber categorically condemns the decision by the British government to supply depleted uranium shells to Ukraine. Their use causes major uranium oxide contamination to the environment," the commission said, referring to research showing that such contamination may lead to mass incidences of disease in both military personnel and civilians.\nAmong other things, the commission cited the WHO World Health Report 2001, mentioning the radiological and chemical toxicity of depleted uranium. In-depth research into workplace exposure to DU showed that the critical organs most prone to toxicity from DU munitions are the kidneys and the lungs, while young children could receive greater DU exposure from contaminated soil when playing within a conflict zone, according to the document.\nIn December 2008, 141 countries voted for a UN General Assembly resolution urging additional research into the effects of munitions containing DU by 2010, but this never took place for various reasons, primarily of a political nature, the commission said.\nThe environmentalists likened this to the use of Agent Orange, a chemical herbicide and defoliant, by the US Army in Vietnam. "The use of that chemical affected over 3 million people, with more than 1 million people under 18 left incapacitated, and suffering from hereditary diseases," the commission emphasized.\nA British Defense Ministry official, Baroness Annabel Goldie, said in a written response to a question by a member of the House of Lords last week that the United Kingdom would supply Ukraine with shells containing DU, which she said are more effective in destroying armored vehicles.'},
{'title': 'DPR expects Leopard, Abrams tanks to appear on battlefield to study them — official',
'link': 'https://tass.com/defense/1595113',
'uploadtime': '27 MAR, 11:58',
'content': 'DONETSK, March 27. /TASS/. Russian forces in Donetsk People’s Republic (DPR) are waiting for Western-made Leopard and Abrams tanks, shipped to Ukraine, to appear on the battlefield, in order to capture them and study them to combat these vehicles more efficiently, says Yan Gagin, advisor to Acting DPR Head Denis Pushilin.\n"Every piece of NATO equipment or military vehicle that we get our hands on goes to research. Every trophy weapon improves our defense industry, helps us know our enemy, understand how and what to use to fight it. Everything that is obtained by our military-technical intelligence agencies will be studied. The Leopard and Abrams tanks are particularly interesting. Communications, security and guidance systems, installed on enemy vehicles, including these very tanks, pose very serious interest," he said, adding that "everything related to radars" is also interesting.\nGagin noted that Russia is already in pos

session of numerous pieces of anti-tank weapons, small arms, armored vehicles and artillery.\n"The vehicles shipped by the West include some very mediocre ones that have no outstanding features. One such vehicle was recently seen near the city of Chasov Year - a Swiss-made Eagle armored automobile. Its specifications have been known for a long time already, there is no need to trophy it, it is no better than the Hummer or the Tigr. Just a generic automobile," the advisor added.\nAfter the beginning of the Russian special military operation, the West has shipped billions of dollars worth of weapons and military vehicles to Kiev. Moscow repeatedly underscored that it views shipment of weapons to Kiev as an irresponsible step that leads to further escalation. Meanwhile, military experts note that Western states often ship obsolete pieces of equipment to Ukraine, replacing their own vehicles with newer ones.'},

 'content': 'DONETSK, 28 March. /TASS/. The torture of prisoners of war in Ukraine has become more brutal, Darya Morozova, human rights commissioner of the Donetsk People’s Republic, told TASS on Tuesday.\n"When we talk to people who we bring back from Ukrainian captivity, it becomes clear that torture is still prevalent. It has only become more severe on the part of the Ukrainian militants," Morozova said.\nThe Ombudsperson\'s Office sends appeals to international human rights NGOs regarding each separate episode, she said, adding that this does not accomplish anything, however. Nevertheless, she believes that the multi-level recording of Kiev’s war crimes should remain intact. "We receive very brief, standard answers. For example, ‘Thank you for the information, we took note of it,\'" the commissioner added.\nPrisoner swap negotiations are a huge job, as the Russian side is literally fighting for every individual on the list, she stressed.\nThe DPR regularly reports about Kiev torturing captured DPR servicemen in Ukraine. Last December, Denis Pushilin, the region\'s acting leader, said in an interview with TASS that captured DPR military personnel were being tortured with extreme brutality in places of detention in western Ukraine. Pushilin also noted that Kiev violated the rights of prisoners of war. According to him, all Russian servicemen in Ukrainian captivity are subjected to torture and humiliation.'},

reiterating the importance of an honest, impartial and independent investigation [into the Bucha situation] to establis
h the truth. The investigation should answer four questions: identify the bodies, time and cause of people’s death, tra
ces of possible movement of bodies," she said.\nAccording to Zakharova, the situation in Bucha is "a provocation in ord
er to launch a pre-prepared package of anti-Russian sanctions and disrupt Russia-Ukraine talks."\nRussian Foreign Minis
ter Sergey Lavrov earlier spoke about the attempts to disrupt the talks that were held in Istanbul and were successfull
y progressing as early as last April. In October, the Russian top diplomat pointed out that the talks were disrupted "u
nder a direct order of the United States and London," which "fully control the Zelensky regime."'},
{'title': 'Ukraine builds up forces near engagement line in Zaporozhye Region — politician',
'link': 'https://tass.com/politics/1596707',
'uploadtime': '30 MAR, 08:38',
'content': 'MELITOPOL, March 30. /TASS/. Ukraine continues to build up its forces in the Zaporozhye Region, including
near the engagement line, Vladimir Rogov, chairman of the We Are Together With Russia civil society group, told TASS on
Thursday.\n"Regarding the combat engagement line, a buildup of Ukrainian forces is being reported everywhere: in Orekho
v, and in the area of Kamensky, < ... > in the area of Stepnogorsk, and at a greater distance from the engagement line,
for example, in Kamyshevakha. <... > There is a buildup of personnel, equipment, ammunition, fuel and oil. [The stockpi
ling] of fuel and oil suggests that they will not stand still," Rogov said.\nHe said that interruptions in mobile commu
nications and Internet services had been on the rise in the Kiev-controlled parts of the Zaporozhye Region in recent da
ys.\n"This is intentional, as Zelensky\'s militants are well aware of the disloyalty of the local population and are do
ing everything possible to prevent people from reporting what is happening, for example, about the transfer of equipmen
t. It is no secret that we receive a lot of information to adjust fire and strikes from the territory of the region tha
t’s temporarily occupied by the Zelensky regime," Rogov said.\nOn March 27, he told TASS that the Armed Forces of Ukrai
ne had assembled up to 75,000 people in the Zaporozhye Region following the attempted offensive on March 23 that was re
pelled by Russian forces, which killed up to 400 militants.\nEarlier, Rogov told TASS that Ukrainian forces are prepari
ng an offensive on Melitopol in order to reach the Sea of Azov and sever the land corridor to Crimea from the supply ro
utes for Russian forces and the population of the peninsula. According to the politician, the Armed Forces of Ukraine w
ill be ready for active operations in the Zaporozhye Region in late March or early April.\nUkrainian Defense Minister A
lexey Reznikov said in an interview with the Polish news outlet Gazeta Wyborcza that was published on March 29 that the
Armed Forces of Ukraine were wrapping up preparations for several "counterstrikes," but would be unable to carry them o
ut now partly due to weather conditions.'},

e international community should create conditions for peace negotiations, China's Deputy Permanent Representative to t
he United Nations, Geng Shuang, said on Friday at a UN Security Council session.\n"All the parties should remain ration
al, exercise restraint, avoid any escalation of tensions, and halt any actions that could result in further exacerbatio
n of the crisis and may spark its spiraling out of control," he said. "The international community needs to immediately
advocate for peace talks and to create conditions for their quick resumption."\nGeng added that, "China will continue t
o play a constructive role in achieving a ceasefire and ending the conflict.".'},
 {'title': 'Peace in Ukraine possible long ago had US stopped flooding Kiev with arms – Russian envoy',
  'link': 'https://tass.com/politics/1597939',
  'uploadtime': '31 MAR, 15:01',
  'content': 'UNITED NATIONS, March 31. /TASS/. The situation in Ukraine would have been peacefully resolved a long tim
e ago had the US and its allies stopped flooding the Kiev regime with weapons, Russia's Permanent Representative to the
UN Vasily Nebenzya said on Friday.\n"Peace could have been established in Ukraine a long time ago if the US and its all

ies had not flooded the Kiev regime with arms and had not forced it to toss thousands of new conscripts into the sensel
ess slaughter," he said at a session of the UN Security Council.\nThat said, the diplomat pointed out that the Ukrainia
n conflict would not have happened at all had Washington and its allies not organized a coup in Kiev in 2014. "Russian
tanks would not have come to Ukraine and Ukrainian soldiers would not have been dying for foreign, alien geopolitical i
nterests if the US and its allies had not carried out an unconstitutional coup d’etat in Kiev in 2014 and brought Russo
phobes, nationalists and Nazis to power, had not armed them and readied them for war against Russia under the cover of
the Minsk Accords," the Russian envoy noted. "And had they not covered up their crimes against the Russian-speaking pop
ulation in eastern and southern Ukraine," he added.\nNebenzya stressed that Western countries are trying to impose on t
he international community a set of rules that benefit only them and, at the same time, do not consider themselves to h
ave any obligations. "The unscrupulousness and inconsistency of the collective West with regard both to the situation i
n Ukraine and to other international issues vividly illustrates the very essence of the so-called rules-based order, wh
ich has nothing to do with international law," he said. "This way, Western countries are simply trying to impose their
own rules that are beneficial only to them, in order to demand strict adherence to them from other countries. And, natu
rally, they do not consider themselves bound by any obligations whatsoever," the Russian diplomat concluded.'},

'MOSCOW, March 22. /TASS/. Artyomovsk (called Bakhmut in Ukraine) has been fully sealed off by Russian forces and all t
he approaches to the city are under artillery control, Yan Gagin, military-political expert and adviser to the acting h
ead of the Donetsk People’s Republic (DPR), said on Wednesday.\n"The city is in operational encirclement, which means t
hat all the approaches and all the transportation arteries leading to it are under the control of our artillery. In pri
nciple, it can be said that the city has been actually sealed off," he said in a live broadcast on the Rossiya-1 televi
sion channel.\nCurrently, Russian forces control about 70% of the Artyomovsk area. The Ukrainian garrison positioned in
the city numbers about 10,000-strong personnel, he added.\nArtyomovsk is located on the Kiev-controlled part of the Don
etsk People’s Republic and is a major transportation hub for the Ukrainian army’s supplies in Donbass. Fierce fighting
for the city is underway. Acting DPR Head Denis Pushilin has repeatedly said that there is no evidence of the Ukrainian
army’s plans to leave Artyomovsk. Meanwhile, Kiev claims that the city’s defense will be bolstered. Ukrainian President
Vladimir Zelensky earlier said that Ukrainian troops would not surrender Artyomovsk and would fight for it as long as t
hey could.\n'
